

Gladiator Hosted Network Solutions™

Trusted Services that Reduce Your Infrastructure, Risk, and IT Burden

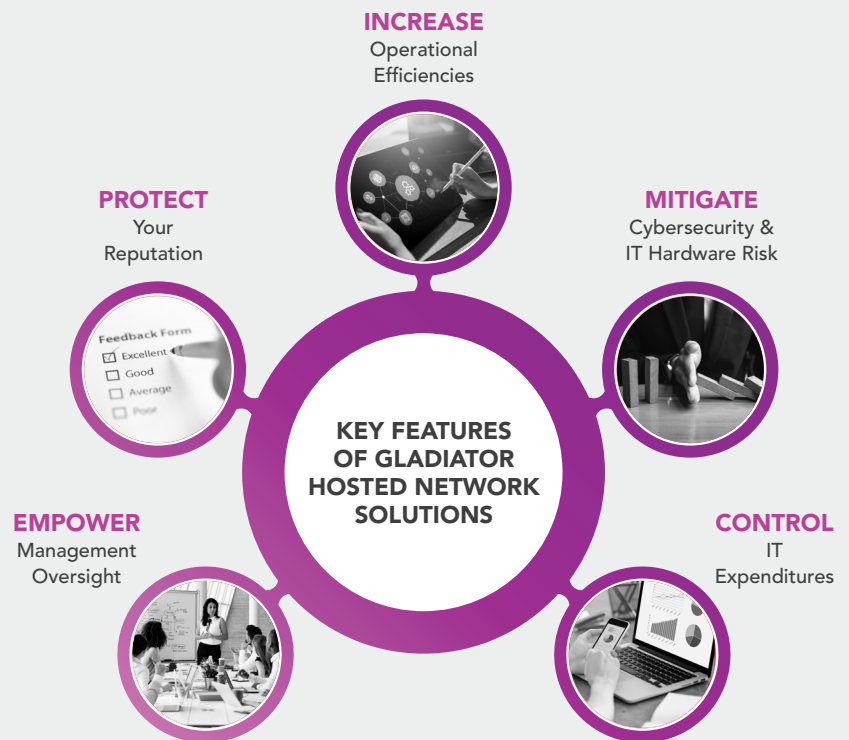

Has your financial institution (FI) found it challenging to keep pace with the latest technological advancements, regulatory compliance directives, and customer service demands? If so, you are not alone.

With Gladiator Hosted Network Solutions (HNS) from ProfitStars®, you can seamlessly move IT infrastructures to the cloud to leverage its many benefits. By moving your infrastructure to a secure, private cloud and transferring management responsibilities to experienced advisers and engineers who understand your business, your internal IT resources are free to focus on more strategic initiatives while at the same time lowering your risk profile.

Proven Expertise from an Industry Leader that Understands Your Business

Working with Gladiator HNS, you gain a partner that has been providing outsourced core banking and credit union applications for many years, in addition to hosted IP telephony and hosted network security services. This means you can bring your institution the best in:

- **Regulatory Compliant** - Gladiator HNS is under direct FFIEC oversight. Clients can request a Report of Examination (ROE). Additionally, you will receive SSAE-16 SOC2 audit reports annually.
- **On-Demand Resources** - Gladiator’s HNS uses a consumption computing methodology. Rather than purchasing servers, software, data center space, and network equipment, your institution simply pays for the resources you need when you need them.
- **Cybersecurity** - Mitigate your cybersecurity risks with our secure, private cloud. Your institution hides behind us. We connect to the internet and you connect to us. Gladiator HNS utilizes multiple layers of security, including JHA’s enterprise cloud security, Advanced Malware Protection, dedicated UTM, VMware’s VDI, encryption, next-generation endpoint security, and secure private routing. With Gladiator HNS, your cybersecurity posture is robust and resilient, greatly mitigating cyber threats.

With Gladiator HNS, you can expect expert guidance and management for all the computing resources you need to migrate your infrastructure to a secure, private cloud environment. Options include:

- Hosted Servers – Designed to host some or all of your institution’s network server-based applications, including JHA apps, network, and most third-party servers.
- Disaster Avoidance – Utilizes the same methodology that JHA OutLink Processing Services™ uses for secure core and item processing.
- Site Redundancy – Hosted in JHA data centers for redundant site replication.
- Easier Compliance – Our systems patching, managed IT, and managed security services include our on-demand report service, making it much easier to provide information to auditors.
- MITS – Includes Gladiator Managed IT Services™ (MITS) monitoring, alerting, reporting, and Windows OS patching for contracted servers. The HNS MITS service also includes remediation of alerts and patching issues as they happen.
- Enhanced Security – All hosted services are wrapped in 24x7x365 in-depth layered security monitoring.
- AMP – Gladiator Advanced Malware Protection™.
- OS Support – Windows and Linux OS, any manufacturer supported release.
- Consumption-Based Model – Services based on consumption usage, including server memory, storage, and licensing requirements.
- Productivity Software – Support for Office 365 or traditional Microsoft Office and Exchange email.
- Remote Access – Includes internet access layered with Gladiator Firewall/IPS device and server security monitoring for secure remote user access.
- Service Desk – Offers your institution an employee Service Desk for end user day-to-day support.
- Communications – MPLS Services to redundant JHA data centers, with VPN backup internet-based communications. Bandwidth is based on services being offered.
- Tapeless Backup – Includes tapeless backup for granular restore in addition to site replication. Supports you with one more layer of redundancy.
