

# TEAMWORX FOR LABOR MANAGEMENT & SCHEDULING

**Restaurant labor management that schedules the right people, at the right place, at the right time... automatically.**

TeamworX is the industry's best-in-class labor management employee self-service portal. Designed to keep the entire team on the same page regarding current shift schedules, time-off, and communication. Available for free as an iOS and Android mobile app or as a web-based, zero-footprint and device-aware web app. As a web app, it can run on any phone, tablet, or computer so you do not have to worry about what devices your team members are using in the field.

## Easy-access restaurant employee portal

Employees can view their schedule, certify time worked, request time-off, request to pick up shifts, and indicate when tasks are completed. Managers can empower their employees to ensure all shifts are properly staffed and tasks are completed. This is done efficiently and reduces the risk of shifts going unfilled and jobs going undone.

## Simple online scheduler with auto scheduling capability

Create, manage, and distribute automatically optimized schedules anywhere at any time using a web browser. Makes creating shifts easier and more time efficient for managers. In addition, the risk of "no call, no shows" is reduced because employees have easy access to their schedules on their personal devices.

## Fast manager approval

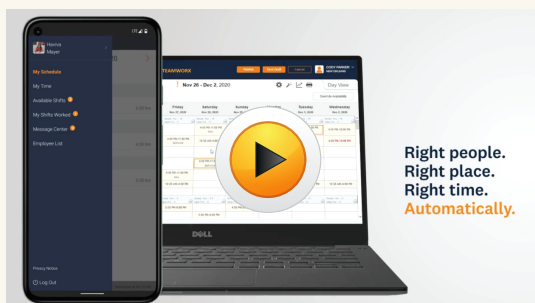

Managers have full labor management oversight and final say for approval of time off and schedule shift requests. Managers can ensure that schedules are optimized based on daily forecasts and skill levels for each required position.

## Integrated workforce messaging and manager log

Managers can message any or all employees with pertinent information and assign tasks (employees can only receive messages and tasks from management.) Consolidates critical information such as daily shift and personnel notes. This increases communication efficiency because information is sent only to those who need it. Managers can easily access communications, notes and follow-up items. Notes are easily accessible from any mobile device.

## Total compliance with labor laws

Each shift schedule is checked against local, state, and federal labor laws to ensure compliance with regulations. Managers are notified of potential violations and their corresponding financial penalties before they happen. Labor costs are optimized because schedules can be managed in a way that reduces or eliminates overtime and legal fines pertaining to labor law violations.

Right people.  
Right place.  
Right time.  
Automatically.

"The easy-to-use Teamworx app has improved communications between restaurant managers and their staff. It remembers each team member's login, and drops them right into their schedule so that they can review their hours, swap shifts with others, or simply talk to the managers." **IT PRODUCT MANAGER, CARIBOU COFFEE**
