

HANZO HOLD FOR GOOGLE WORKSPACE

Make discovery easier and less costly with targeted data control and visibility.

ENTERPRISE-GRADE DATA MANAGEMENT THAT'S SIMPLE YET POWERFUL

Corporations around the globe have adopted Google Workspace (formerly G Suite), an integrated workspace that's simple to use and powers collaboration and productivity from anywhere. With the integration of Hanzo Hold and Google Workspace, organizations can easily apply a legal hold to Google Vault, unifying the management of collaborative data sources for discovery. Corporations can preserve data in place and have greater visibility of who and what data is on hold. Hanzo also maps drive data to enable targeted collections so you can collect and review precisely the data you need—saving unnecessary and costly review time.

EASY & DEFENSIBLE PRESERVATION

Hanzo orchestrates custodian-based legal holds via Google Vault, preserving data in place and collecting targeted information.

TARGETED COLLECTIONS

Search file metadata including names, dates, drives, folders, and many others, as well as by revision history to precisely scope to the Google Drive data you need to collect.

EFFICIENT & COST EFFECTIVE

Scalable cloud solution can handle matters of any size and empowers cost-effective preservation and targeted collections. The collect-once approach avoids the risk of unnecessary copies and reduces the cost of processing.

UNPARALLELED VISIBILITY

Visually mapping Vault and Drive environments to custodian identity provides better understanding into who and what is on hold and where the data located.

EARLY CASE ASSESSMENT + DISCOVERY

Search flexibility makes it easy to identify content for export or to identify additional collections based on key metadata or file content.

REVIEW-READY EXPORT

Pre-processed native and text files along with complete metadata integrity for external review and production.

UNCOMMONLY GOOD DATA RETENTION AND EDISCOVERY FOR GOOGLE WORKSPACE

Discovery can be complex and confusing. Hanzo Hold makes preserving Google Workspace easy and gives your legal team confidence when responding to eDiscovery requests.

GOOGLE DATA MAP

Your Google workspaces are mapped, helping you identify who and what is on hold. The easy-to-use interface puts you in control of the data associated with your legal hold matters.

SCOPE + PRESERVE

Manage the precise preservation of Google Drive data via Vault by custodian, account name, date range and key metadata. Scope information that is subject to preservation requirements without multiplying your data risk.

SEARCH

Conduct analysis and early case assessment (ECA) of preserved data with advanced text and metadata search, quickly gaining insight into the data in your Google environment.

CONTEXTUALIZE WITH LINKED CONTENT

Companies with Google Workspace often have Slack as part of their collaboration stack. With Hanzo Hold for Slack, Google Drive uploaded and linked content can be viewed and collected in context at a channel level.

TAG + CULL

Easily cull down information and tag responsive Google content for export and/or further review — significantly reducing the volume of data that you need to send out for costly review.

EXPORT

Easily package and move data directly from Hanzo into the review platform of your choice to share with your Legal or internal investigation teams.

ABOUT HANZO

Hanzo provides modern eDiscovery and compliance software for enterprise organizations. Our solutions empower legal and compliance teams to efficiently manage the preservation, targeted collection and review of dynamic content from enterprise collaboration applications, social media and complex websites. Hanzo is SOC 2® Type 2 certified, demonstrating Hanzo's commitment to data security. The company serves large corporations across the globe — giving them control, visibility, and context over their data to reduce cost and mitigate risk.
