

Questa Data Analytics

AT A GLANCE...

Questa, a Data Warehouse, can inform strategic and operational decisions, raise standards and improve learning across MATs and Schools.

Drawing existing data from multiple MIS, as well as other sources ranging from data systems to Excel spreadsheets, Questa provides accurate data reporting.

The automated dashboards and analytics provide up-to-date intelligence through easy to interpret visuals, enabling leaders to compare and contrast the performance of every school, subject, teacher and student across a MAT—in just one single multi-layered view.

Why choose Questa?

Support great school leadership.

Questa ensures that the huge amount of data captured within your organisation is turned into useful information. MAT and School leaders can then use this to make data led actionable decisions.

Remove the burden of scrutinising data from multiple MIS data sources.

Questa pulls your data sources into a Data Warehouse, allowing you to access bespoke dashboards with selected KPIs and filters, covering all your schools.

Be able to measure usefully

Alongside your Trust level measures, Questa enables you to delve deeper into school and individual pupil attainment and behaviour levels. You can also measure your own results against national performance tables.

Know where to intervene early

With key data at your fingertips, you can spot trends and patterns early so you can intervene and act quickly.

Secure cloud-based system

Questa data is held securely, hosted in a Level 1 data centre, transmitted over HTTPS with 128 bit encryption.

How can Questa help your MAT or school?

Instant access to all the data you need

Release the time taken to analyse data, giving you and your team valuable time back.

Accurately analyse, forecast and report on progress within different pupil groups

Identify patterns, share best practices, and see how your interventions are making a difference to pupils.

See a clear performance snapshot

Quickly and easily see how your MAT and individual schools are performing- Questa can be used to dig deeper when required.

Consistent report styles across the modules

Regardless of which MIS systems are used, Questa provides you with clear, consistent reporting styles so you can easily compare and contrast your data.

Questa dashboards give you context

Seeing your data presented in context to all your schools, allows you to have the right discussions with the right schools, departments and teams, rather than having 'broad brush' data that lumps everyone together.

System building & testing

Information gathered during the Discovery Phase is used to build your online Questa service.

The Questa project team then:

- runs a test using your first tranche of data
- scrutinises the data quality/analytics for quality assurance purposes
- liaises with you to ensure the correct functionality of each dashboard
- makes amendments where required
- holds a final review
- rolls Questa out across the MAT.

We also:

- support Questa at both Trust and school level.
- set out a plan to work with the data manager to identify all the roles and responsibilities.

Ongoing excellence

Once your Questa Data Analytics Service is delivered, you receive ongoing maintenance and support via our dedicated Questa Service Desk. As well as the latest version updates.

As experts in ICT in the UK Education market, we live and breathe ICT Excellence in Education and want to share that expertise with you.

Book a Questa Demo

We can arrange a free 30-minute demo - all you need is internet access and a telephone. Just get in touch to [book your demo](#).

Set up

Initial meeting

Meeting with your Data Manager, we scope out the project in terms of data collection, access permissions, security, dashboard design, project timescales and data quality.

Determining what you need

Following this, you can ascertain what level of service you will require from us.

For example, a large MAT might want a phased project, bringing on-board a handful of schools initially. This ensures that new processes are better determined before rolling out to the remaining schools.

Consultative Discovery Phase

The initial stages also include consultation sessions with key leaders, data managers and ICT staff. During this phase we examine the quality and consistency of your existing data.

At this point we might offer you additional data services to help you organise your data and processes. We can also ensure there is alignment in the way individual schools within a MAT are recording their information.
