

## Economic highlights from the week ending on October 1, 2021

Shelly Henbest, CFA  
*Senior Credit Analyst*

Economic data remain somewhat mixed and we believe the ongoing health crisis and related supply chain bottlenecks continue to have a meaningful impact. Nevertheless, we believe the underlying momentum of the economy remains strong. Meanwhile, Covid infection rates in the US and on a global basis are declining, which gives us optimism. Notably, the ISM Manufacturing Index rose to 61.1 in September, stronger than expectations. New orders were particularly strong and the report suggests that manufacturing activity continues to expand. Meanwhile, housing prices remain quite firm, up 20% year-over-year in July, according to the Case-Shiller 20-City Composite Home Price Index.

The Personal Consumption Expenditures (PCE) index was up 4.3% year-over-year in August, versus up 4.2% in July. Core PCE was up 3.6% year-over-year in August, unchanged from July. Inflation readings continue to run well above the Fed's longer-run target of around 2.0%. We expect upward pressure on inflation from supply chain bottlenecks and pandemic-related disruptions is likely to remain elevated over the near-term. Resolving some of the supply chain issues will be supportive of the Federal Reserve's transitory narrative on inflation.

President Biden signed a bill yesterday to extend government funding through December 3<sup>rd</sup>, averting a partial shutdown just before the September month-end deadline. However, Treasury Secretary Janet Yellen has cautioned that Congress must also suspend or raise the debt ceiling by October 18<sup>th</sup> to avoid a Treasury default. While extending the debt ceiling does not authorize any new spending, the issue has been tied up in a political debate over infrastructure spending, which we believe has fueled uncertainty and an uptick in financial market volatility. The Cboe Volatility Index (VIX) and MOVE index (MOVE), measures of equity market and Treasury market volatility respectively, are both elevated relative to their 5-year averages. We believe a near-term resolution of the debt ceiling debate would be a positive catalyst for the financial markets.

The September employment report will be released next Friday. The current Bloomberg consensus estimate for September nonfarm payrolls is 488,000, a bit softer than the 6-month average but up from 235,000 in August. It will be the only employment report prior to the next Federal Open Market Committee (FOMC) meeting on November 3<sup>rd</sup>. Unless the September employment report is much worse than expected, the Fed is widely expected to start tapering asset purchases before year-end and we believe the hurdle rate for policymakers not to announce their intent to taper at the November meeting is high. If or when the Fed does make an announcement about tapering, we will be closely scrutinizing the timeline and pace for a signal on the Federal Reserve's concerns specific to inflation.

---

## Next Week

*Factory Orders, ISM Services, International Trade, Consumer Credit, Employment*

Fixed income investments are subject to interest rate, credit, and market risk. Interest rate risk: the value of fixed income investments will decline as interest rates rise. Credit risk: the possibility that the borrower may not be able to repay interest and principal. Low rated bonds generally have to pay higher interest rates to attract investors willing to take on greater risk. Market risk: the bond market in general could decline due to economic conditions, especially during periods of rising interest rates. The VIX Index is a financial benchmark designed to be an up-to-the-minute market estimate of the expected volatility of the S&P 500® Index, and is calculated by using the midpoint of real-time S&P 500 Index (SPX) option bid/ask quotes. The ICE BofA MOVE Index is a well-recognized measure of U.S. interest rate volatility that tracks the movement in U.S. Treasury yield volatility implied by current prices of one-month over-the-counter options on 2-year, 5-year, 10-year and 30-year Treasuries.*
