

Data Warehousing

Connecting BigTime and BI

Data warehousing allows you to bring data from BigTime into your business intelligence (BI) tool. From there, your BI tool can analyze and report on data from multiple sources across systems.

It's easy to integrate BigTime with your data warehouse, whether you already have one or you want us to host one for you. All you need to know is the connection string and which fields you want to export.

Save Time

Instead of creating, exporting, and combining reports from different software systems yourself, data warehousing solves for siloed data by allowing you to automatically push everything to a central place in one consistent format.

Maximize Value

When it comes to available data, more is better. Regardless of the reporting capabilities in your individual software environments, the ability to easily report on data from multiple sources will get you more value out of each system.

Trust Your Data

Know that the data you're using is accurate and up-to-date by avoiding manual compilation with automatic nightly exports.

Make Better Decisions

Data warehousing powers your Business Intelligence tools, allowing you to make informed decisions based on analytics.

Use the Tools You Love

Whether you have your own data warehouse or want to take advantage of the data warehousing we offer, you're going to want to use your existing or preferred BI tool. We connect to all of them, so your BigTime data works wherever you do.

Bridge the gap between your best-of-breed solutions.
