

# Titan FTP Server Enterprise Edition

## Web User Interface

Data powers your company. Whether in the home office or abroad, your staff, clients, and partners need to access data at their own pace and without burdening your technical support with a multitude of client-specific configuration setbacks.

**Titan FTP Server Enterprise Edition** offers an optional web user interface (WebUI) for convenient access to data. With the Titan WebUI, you can allow an unlimited number of associates to browse data as easily as answering an email. The Titan WebUI is completely operating system-independent and runs in the latest versions of the most popular browsers.

## No Installation Required

Customers and support personnel don't need the added complication of downloading and navigating file transfer software. Different companies use a wide range of FTP clients; others have company-wide policies prohibiting new software downloads. The Titan WebUI eliminates both problems.

With Titan WebUI, customers and partners can access and upload files without purchasing or installing third-party FTP software. Simply direct clients to your Titan portal. With nothing more than an Internet connection, they can log on and upload or download files from anywhere, instantly.

## Effortless Interface

With Titan WebUI, your clients don't need any specialized knowledge to access files. Users can simply log in and access files or upload their own data to the Titan server. Titan's intuitive user interface was designed with end-users in mind, to streamline file transfers and keep business running smoothly.

## Unlimited Connections

Don't worry about license counts and connections. The Titan WebUI allows access to an unlimited number of internal and external users. This is an all-in-one solution for employees, customers, and partners.

Adding to infrastructure as a company grows can be complicated and expensive. Get the best value in the long term, with features built to accommodate you.

### Titan's Web User Interface Streamlines File Transfers:

- No more third-party software
- Intuitive user interface
- Unlimited internal & external users
- Operating system independent
- Compatible with most browsers

## Simplified Support

When a client has trouble accessing your files because their FTP software isn't compatible with your server for one reason or another—or they don't have file transfer software to begin with—the problem inevitably winds up with technical support. But your IT department has enough fires to put out. Handling your clients' wide range of FTP client software isn't good for support timetables or company overhead.

With Titan WebUI, support personnel don't need to learn the quirks of a hundred FTP clients. Consolidate your responsibilities and direct traffic to one simple, easy-to-maintain interface. That's dozens of tech support requests that will never come across your desk.

## About Us

South River Technologies is an innovator in secure file management software. More than 80,000 customers in 130 countries use SRT's software to make remote file access and collaboration more efficient for their customers, partners, and workforce.
