Auditing and Reporting Module (ARM) for EFT™

ANALYZE CAPTURED DATA IMMEDIATELY USING PRECONFIGURED OR CUSTOM DESIGNED REPORTS

Advanced auditing and reporting

The Enhanced File Transfer™ (EFT™) Auditing and Reporting Module (ARM) captures all of the transactions passing through the EFT platform. When you want to run a report, EFT connects to the database, retrieves audited data based on your criteria, and then generates and displays the report. You can then export the report in HTML or PDF format to save or share.
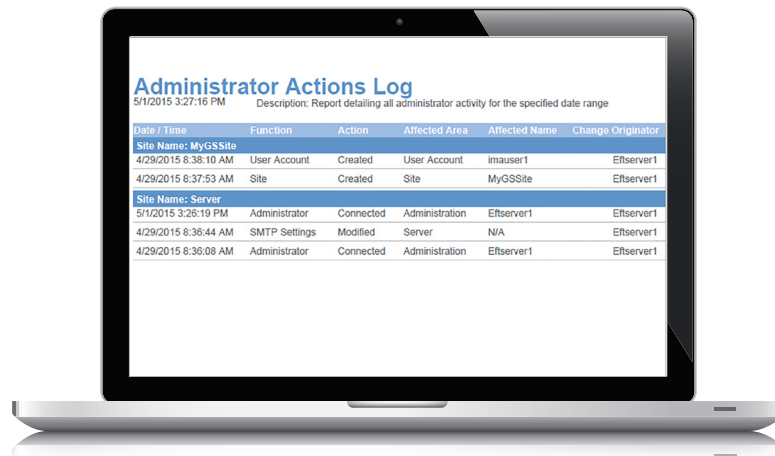

Quickly find and solve file transfer issues

ARM records the events between the server and client, then enables you to effectively search and present that information any way you want, for billing, statistical analysis, troubleshooting, and non-repudiation. ARM captures significantly more data points than standard "flat-file" logging. Data is stored in real time in a relational database, which you can then query from within EFT, or query directly from your own reporting system.

Use built-in or custom report templates

ARM comes with everything you need to run reports of EFT data, including more than 40 preconfigured reports, and a wizard-based custom report designer. The preconfigured reports have been carefully defined based on extensive interviews and research into the most important reporting needs, such as troubleshooting, nonrepudiation, billing, and trending. You can use the preconfigured reports as is, edit the preconfigured reports, or create your own custom reports from scratch. The report designer uses familiar controls that you can use to build or edit reports quickly and easily. You can save your customized report definition templates as XML files to reuse or share.

- Custom report design wizard
- Preconfigured reports
- XML-based templates
- Import XML templates
- Export reports in XML, PDF, or HTML
- Connect to SQL or Oracle database

Preconfigured reports include: file transfer activities, AS2 transactions, Event Rules, security, traffic details, troubleshooting, CIC actions, web services activity, Workspaces activity, executive summary, and administrator actions.

Administrator Actions Log

5/1/2015 3:27:16 PM   Description: Report detailing all administrator activity for the specified date range
