

# Mobile Transfer Client (MTC) for EFT<sup>™</sup>

## MTC SYSTEM REQUIREMENTS

MTC is supported on Android — or iOS-based mobile devices of varying resolutions.

- EFT v6.5.16 and later, SMB or Enterprise
- Android 2.3 or later for general operations
- Android 3.0 or later, if encrypted data store is required
- iOS 6.1 or later (tested on both 6 and 7)
- Licensed per user account

**SECURE ANYTIME, ANYWHERE ACCESS TO INFORMATION STORED ON EFT. YOU CONTROL THE ACCESS.**

### BYOD made simple

Developed for use with Enhanced File Transfer<sup>™</sup> (EFT<sup>™</sup>) by Globalscape, the Mobile Transfer Client (MTC) mobile app allows your employees to use their own mobile devices to access corporate data, while keeping your network secure within the organizational boundaries. With MTC, your organization has the right balance of employee productivity, efficiency, and corporate data security, allowing employees to be on the move with secure access to files stored on EFT.

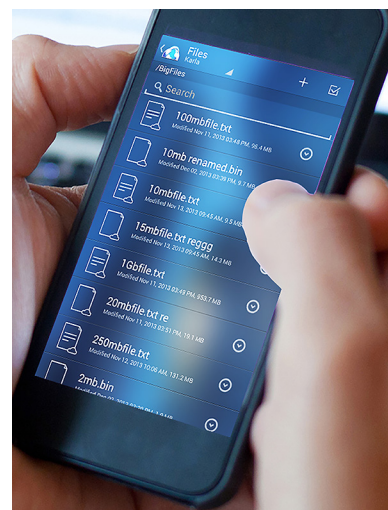

### Security and IT control

MTC keeps files safe and secure while in transit and while at rest. MTC ensures that only authorized personnel can access information, and encrypts files in a storage vault for users that need to work offline.

IT has full centralized control over all policies that MTC enforces when a user connects to EFT such as saving the profile password, saving files to the MTC vault, sharing files as email attachments, and more. Logging can be used to troubleshoot any problems with the MTC app.

### Ease of use

New-user on-boarding is as simple as a single click. When you set up EFT accounts to use MTC, EFT will send a link to the user. After the MTC app is downloaded and installed on the user devices, they can click a link in their email, and their profile will be created and logged in (if you have sent

the username and the password with the link). Depending on the permissions defined for the account in EFT, users can upload, download, preview, open in an external viewer, add to vault, share, rename or delete files, and create folders.

## MOBILE TRANSFER CLIENT FEATURES

EFT's Mobile Transfer Client supports the following features:

### Security

- Secure communications and transport over HTTPS
- SSL certificate management (accept CA-signed certificates, otherwise prompt)
- Secure data storage
- Central policy management that controls:
  - Profile password storage
  - Data caching
  - Storing data in an offline repository (vault)
  - Sharing files via email
  - Opening files in external (third-party) apps

### Profile Management

- Multiple profile support
- Single "tap-on" link for automatic profile provisioning
- Dual-stack (IPv4 and IPv6) support
- International Domain Name (IDN) and Punycode support
- Support for non-default ports
- Auto-login to last connected profile on app launch
- Password reset and recover lost username support
- Full support for Unicode characters

### General Settings and Logs

- Clear profile and vault caches
- Specify the maximum cache size
- Enable logging, including verbose logging
- View detailed transaction logs
- Email logs to your administrator
- Clear all logs
- Disallow password saving (global option)
- Custom/branded profile icons (optional)

### Files Listings and Transfers

- View up to 10,000 files in a directory listing
- Transfer files up to 3GB in size
- Transfer multiple files concurrently
- Pause and resume transfers
- Automatic resume of system paused transfers
- Resume partial transfers from point of failure
- Download files to a separate secure repository for offline access
- Download files and open them using the built-in file viewer (Only certain file types are supported.)
- Open text, log, and other ASCII files in the internal text viewer
- Download files then open in an external program
- Download files and share them as email attachments
- Download files, make edits, then upload the modified version
- Automatic and transparent file integrity checking
- Create, rename, and delete folders
- View download progress
- Abort transfers and retry failed transfers

## ABOUT GLOBALSCAPE
