

- ✓ Build your own “branded” applications over Frontier functionality
- ✓ Control user experience and process design
- ✓ Develop a product configuration application tailored to your products
- ✓ Single source of customer, pricing, and product information

Easily integrate Frontier’s customer, product, and configuration processing and data into your own web portal, mobile application, or customer portal.

Frontier’s eWebServices extend the rich capabilities of Frontier quoting and configuration functionality to your own applications developed internally, or by a web designer of your choice.

Frontier’s eWebServices offers a single source of customer, product, pricing, and configuration information enabling developers to tailor a system addressing branding, marketing, and customer service requirements.

eWebServices consist of a set of RESTful web-services that execute Frontier processes required by external quoting and sales order processing applications.

Frontier eWebServices include web-services in the following areas:

- ✓ ***Client Authentication***
- ✓ ***Catalog and Product Data***
- ✓ ***Customer and Consumer Data***
- ✓ ***Product Configuration Data***
- ✓ ***Product Configuration Rule Execution***
- ✓ ***Quoting and Ordering***
- ✓ ***Order Management***
