# Introducing Global Partnership Agreements

Introduction	3
Why People Choose Us	4
Integrated Cleanroom Solutions	6
Global Reach, Global Capability	8
Benefits	10

The stringent control of process variables is a fundamental requirement for pharmaceutical, technology and manufacturing industries worldwide. We support top-tier global sector organisations to increase quality across multiple facilities by establishing bespoke partnership agreements for integrated cleanroom solutions. Our global partnership customers benefit from time and cost savings, consistency in quality and streamlined procurement, along with the highest levels of service.

# Why People Choose Us

Rely on Connect 2 Cleanrooms as your partner for technical expertise and innovative contamination control. Our customers choose to work with us time and time again. Here's why.

## Experience

We have supported elite technologies in the advanced manufacturing and pharmaceutical industries at a global level for nearly 2 decades.

## Technical Capability

Embedding functional performance into our cleanroom design process, we produce optimum solutions that deliver consistent results whilst managing running costs.

## Integrated Solutions

Our range of integrated contamination control services provide the unique opportunity to tighten cleanliness requirements with one supplier.

## Global Reach

A global provider of cleanroom facilities and services, our team and local service support partners deliver compliance to international industry standards.

## Accredited Team

With in-house engineering capabilities from design to testing, our team of accredited industry professionals have a combined capability you can trust.

1500+

cleanrooms installed

6000+

customers across 6 continents

350+

years combined industry experience

# Integrated Cleanroom Solutions

The successful implementation of a contamination control strategy relies upon an effective interface between a cleanroom's design and its operation. Connect 2 Cleanrooms stands alone in supporting businesses with fully-integrated contamination control solutions from a single source, so you benefit from a partner that understands how your facility, testing and processes interact.

## Cleanroom Design & Build

Our cleanroom solutions deliver functional performance to meet precise requirements. Our cleanrooms are designed with our customer's specific process and industry in mind.

- In-house design and installation with inherent knowledge of cleanroom fundamentals
- Stringent but flexible control of contamination, pressure, temperature and humidity
- Scalable envelope solutions, constructed offsite to minimise downtime and support global implementation
- Integrated monitoring and control systems designed to protect your product and process and promote energy efficiency
- Compliant with quality, manufacturing and industry-specific regulatory standards

## Validation

We qualify controlled environments worldwide to document that performance is in accordance with process requirements and regulatory standards.

- Multi-site 1-5yr service contracts to support companywide compliance and standardisation
- A range of test options with robust documentation to prove adherence to standards including ISO 14644-1:2015 and GMP Annex 1
- Support from design through to operational qualification and re-qualification
- Custom test schedule designed to ensure appropriate tests are conducted to evidence compliance
- Rapid reassurance with full validation reports issued in an average of just 2 working days

## Consumables & Equipment

The selection of appropriate consumables and equipment and reliable on-time supply is a critical factor for all cleanroom facilities.

- Multi-site 1-5yr consumables supply contracts to support companywide compliance and standardisation
- A full portfolio of cleanroom products, furniture and monitoring equipment, including garment laundry and rental
- Support on product selection to balance cost and mitigate risk to product and operators
- Scalable solutions to reduce risk and manage change across your supply chain

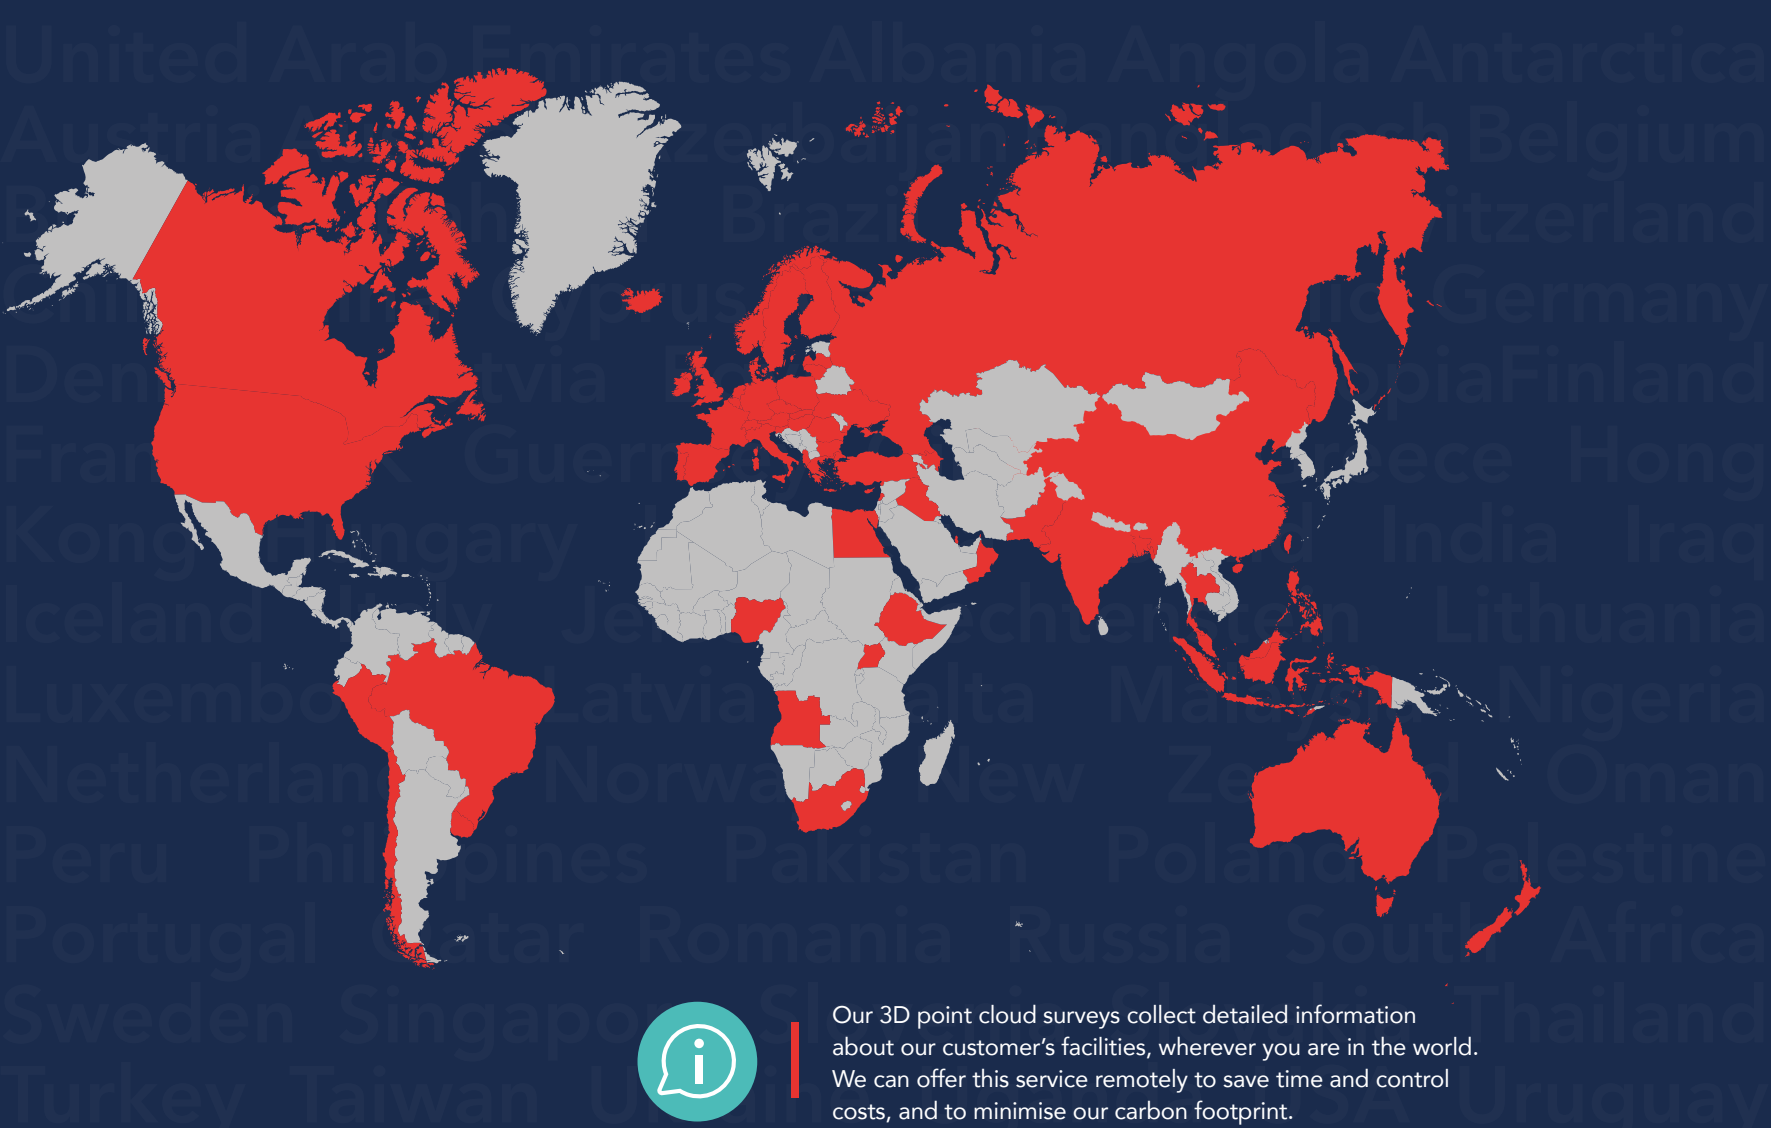

## Operator Training

The biggest contamination risk in a cleanroom is people and their behaviours. Training can reduce variables to improve process yield.

- Minimise the introduction, generation and retention of contamination through a consistent approach to operator training
- On-site half or full-day packages to promote the responsibility of each operator to manage cleanroom behaviours
- A balance of theory, interactive demonstrations and group activities to encourage engagement on every level
- Attendance documentation to support internal processes such as: Restricting cleanroom access to trained operators

# Global Reach, Global Capability

Our 3D point cloud surveys collect detailed information about our customer's facilities, wherever you are in the world. We can offer this service remotely to save time and control costs, and to minimise our carbon footprint.

From Cairo to Silicon Valley, our cleanrooms are distributed, installed and validated with ease and precision by our own specialist engineers. We actively transact with over 6000 customers across 6 continents. Our global structure allows us to offer support to customers with cleanroom facilities in multiple locations.

## Product Design

Modular design and offsite construction methodology facilitates the global deployment of our cleanroom systems. We use digital modelling to overcome challenges in cleanroom design, delivering advanced air handling performance and accurate interfaces using robust envelope solutions.

## Supply Chain

A comprehensive product portfolio from the world's leading contamination control brands, enables us to deliver reliable, cost-effective and sustainable solutions to meet your critical requirements, regardless of your location.

## Structure

Our competent and qualified Installation and Validation team operate worldwide to ensure a consistently high level of quality and compliance. With a multi-disciplined, in-house team of cleanroom experts, we have expansive industry experience, retaining applied knowledge and skills.

# Benefits

A Global Partnership with Connect 2 Cleanrooms will drive value across multiple business functions and facilitate the sharing of good practice across sites. Our wide range of products and solutions are designed to streamline your contamination control strategy.

## Standardisation

Working with us across multiple facilities gives you the opportunity to deliver consistency in cleanroom design, specification, monitoring, validation, training and consumables. This approach generates efficiencies, drives value and instills confidence in the performance and reliability of your controlled environments.

## Time-saving

A Global Partnership Agreement allows for an expedited specification and procurement process. Ongoing consultancy and advanced notice on projects allows for predetermined requirements and pre-contract design work to generate time-saving opportunities and protected capacity.

## Quality

With us as your global cleanroom partner, we'll use an insight-driven approach to discover the cost to your organisation of any quality risks that exist within your clean manufacturing environment. We will then provide tailored solutions to mitigate these risks to improve quality and yield.

## Service

Global Partnership customers benefit from a premium level of service. Your dedicated contact will build and manage a bespoke agreement to suit your product, process and business. Planned strategy meetings with your organisation will ensure continuous improvement within your contamination control.

## Cost

Partnering with us as an integrated supplier, allows us to provide investigation and analysis on your entire contamination control programme. From access to pricing matrixes, to energy-efficient air-handling, to efficiencies generated by working with a single point of supply; we can drive profitability.
