5 Reasons Why DeFi Developers Are Choosing Chainlink

With Chainlink Data Feeds now live on **12 blockchains**, developers are choosing Chainlink oracles to power their DeFi applications across:

- Lending and borrowing
- Synthetic assets
- Stablecoins and wrapped assets
- Payments
- Options and futures
- Tools and services
- Decentralized exchanges
- Asset management
- Insurance
- Yield
- And more

1 The Most Time-Tested Oracle Solution in the Blockchain Industry

Chainlink is the industry standard oracle solution for highly accurate, tamper-proof, and real-time market and price data.

800+
oracle networks launched

2B+
data points served on-chain

Tens of Billions
of dollars in on-chain value secured

**Data as of February 2022*

2 High-Quality Data and Full Market Coverage

Chainlink Data Feeds feature three tiers of decentralized aggregation—at the data source, node operator, and oracle network levels.

With Chainlink, DeFi developers have peace of mind knowing that their dApps are receiving secure and accurate price data in a reliable manner, even amid sudden shifts in volume, flash crashes on illiquid exchanges, flash loan attacks, and other data risks.

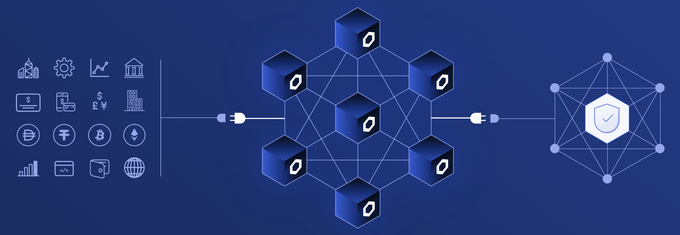

3 The Most Decentralized, Secure, and Reliable Oracle Infrastructure

Each Chainlink Data Feed is secured by a decentralized oracle network (DON) made up of independent, geographically distributed nodes run by world-class DevOps teams.

Chainlink node operators have a verifiable history of routinely posting oracle updates even during periods of extreme volatility and blockchain network congestion.

4 Ready-Made Oracles for Rapid Integration

Chainlink Data Feeds provide developers with a time-tested turnkey oracle solution that enables them to confidently plug and play decentralized oracle networks into their DeFi applications for easier testing and quicker go-to-market timelines.

5 Trusted by the Largest Platforms

Developers who choose Chainlink are joining some of the largest and most trusted protocols across the blockchain ecosystem.

Chainlink supports **over 1,000** projects, including:

AAVE · Compound · Liquity · ALCHEMIX · BENQi
SYNTHETIX · Sushi · dYdX · ABRACADABRA.MONEY

AND MORE!
