SIP Trunks
High Performance Business VoIP

Reduce Your Telco Costs by Up to 50%

SIP trunks and business VoIP deliver significant benefits to any business operation and is superior in features and functionality when compared to traditional phone lines. The technology is perfectly suited to businesses looking to dramatically reduce their telco costs and gain access to a wide range of additional features and functions.

Exceptionally Cost Effective

SIP Trunks are the most cost effective way of delivering business phone line capacity to a PBX phone system. Significantly reduce your line rental and call costs.

Fully Portable and Scalable

No physical telephone lines to connect or relocate. Additional call capacity can be activated almost instantly. Connect or disconnect call lines to suit your current business requirements.

Superior Functionality

Delivering the ultimate in business flexibility. SIP trunks can be deployed in a variety of ways including PBX Systems, IP handsets, a mobile app or a softphone application.

Deploy SIP Trunks Across Multiple Devices

SIP Trunks can be deployed in a number of ways including PBX, IP Handset, a Softphone Application or a Mobile App. This makes them exceptionally versatile and able to fit almost any business requirement.

PBX Systems

BusinessCo SIP Trunks can be used with all major PBXs. Connect them directly to the existing PBX and replace existing telephone lines to reduce line rental and take advantage of cheaper calls.

IP Phones

SIP trunks can be programmed directly into an IP phone which then becomes a functioning telephone with its own call line and phone number. To make and receive calls, all you have to do is connect the IP phone to an existing broadband service.

Softphone Apps

Turn your PC or laptop into a fully functional phone by programming a SIP trunk into one of the many softphone applications available. Or use a mobile app to call from your mobile phone. Take advantage of local Australian call rates when travelling overseas.
