

# Hosted PBX

Big Business Features. Small Business Price.

## Reduce Costs and Gain Superior Functionality

BusinessCo hosted PBX systems deliver functionality unmatched by on-premise phone systems. It's the replacement technology where SIP trunks are used instead of telephone lines, and IP phones together with Softphone Apps replace the PBX handsets.

### Superior Reliability and Redundancy

Enterprise grade hosted PBX service with full redundancy and disaster recovery process to ensure your business always stays connected.

### Enterprise-Grade Features and Functions

All features and functions are included. Simply choose features best suited to your business and turn them on or off as required.

### Fully Managed Hosted PBX System

Take the hassle and time out of managing your own PBX System. We make it easy for you by managing the system on your behalf.

## Transform Your Business Communications

BusinessCo Hosted PBX systems are fully scalable, offer unprecedented flexibility, require low capital expenditure, and are virtually maintenance-free.

**Enterprise-Grade Call Management Features** designed to ensure every call creates an outstanding caller experience.

**One PBX System** across all locations and remote workers to unite your business.

**Advanced Call Monitoring Functions** to help you manage your business and train team members.

**Compatible with Multiple Devices** - use with IP Desk or Cordless phone, Web Softphone App or a Mobile App.

**Multi Channel SIP Trunk** with every extension to ensure you'll never run out of call capacity.

**Fully Managed Service** and **Online PBX Portal** to ensure your PBX is always up to date.

**Call Conferencing** and **Call Recording** for seamless communication and complete functionality.

**PLUS** many more Features and Functions.

## Why Choose the BusinessCo Hosted PBX

BusinessCo PBX is powered by one of Australia's leading providers of cloud based PBX systems, with an extensive network here and overseas. It has an [uptime SLA of 99.999%](#) and utilises some of the best technology available..

### Easily Scalable and No Telephone Lines Necessary

Create a fully functional business PBX system at a fraction of the cost of an on-premise system. Add extensions as your business grows to as many as required. Rapid provisioning means any new extensions are activated and configured within hours, not days. Save costs and gain complete flexibility by not having to install traditional telephone lines.

### Fully Portable and Free Inter-Account Calls

The physical installation of the PBX system is limited to connecting the IP phones to your broadband network. There is no other on-premise equipment, and to relocate all you have to do is unplug the handsets and transfer to the new premises. Calls are free between PBX extensions, regardless of where they are in the world.

### Low Equipment Cost and Virtually No Maintenance

Equipment cost is limited to the purchase of the IP handsets with a large selection of business grade phones from as little as \$79. There is no other on-premise equipment necessary and that means no on-going maintenance.

### All Features, Functions and Software Updates Included

The system comes complete with every feature and function that your business may need. They can be utilised depending on your business requirements. As opposed to IP-PBX systems which require regular software updates, a hosted PBX system is delivered as a complete service. It's always up to date with the latest software.

### One Company System and Immediate Configuration

Being cloud-based, hosted PBX extensions can be configured onto one system and used anywhere there is a suitable broadband connection. Businesses can then deploy extensions across any number of offices, remote sites, and even overseas. Make immediate changes to your system configuration without the need for a PBX technician.

### Superior Reliability and Redundancy

Being an enterprise-grade hosted PBX system, it comes with full redundancy and a disaster management process. Automatic failover to an alternative site and immediate restoration through auto-provisioning will ensure your business stays connected.
