

Audio Video System Enhances School District Administration Building

Enhancing conference room meetings with modern audio & video technologies

The Customer

Suburban public school district

Industry

K-12 Public Schools

Location

Greater Seattle Area, WA

Duration

3 Weeks

Services

- 4K TV/Video
- Presentation System
- Assisted Listening Device
- Paging System

The Challenge

Our client serves more than 20,000 students with 27 school buildings in the district. The Seattle suburban school district received funding to improve their aging administration building.

The administration wanted to upgrade their existing boardroom and conference rooms with connected audio video systems. Their goal was to leverage the latest meeting room technologies while building an infrastructure that allows the client to easily integrate future advancements in audio visual solutions.

The Solution

Wachter met with the administration to understand their needs and configure the technologies necessary to achieve their goals.

Our technicians designed and installed a scalable solution. This solution included 4K televisions, tabletop touch panels, wireless microphones, and bodypack transmitters. Wachter's team effectively built a network infrastructure and installed the cabling and infrastructure equipment.

The Results

Wachter completed this project for the school district administration on-time and within budget.

This new audio and video system provides state-of-the-art technologies that enhances meetings of administrators, faculty, and staff of the school district.
