- PoE Network Switch
- HDMI Switcher
- Mobile Device Controls

The Challenge

Life has changed drastically because of the COVID-19 pandemic and religious institutions have had to alter their services as well.

A mid-sized suburban church near Nashville wanted to make attending church services safe for their congregation. To meet this challenge, the church needed to integrate new audio and video technologies into its existing AV system.

The audio and video solutions needed to be user-friendly while also leveraging new audiovisual devices to provide an enhanced worship experience for in-person and online congregations.

The Solution

To help its congregation attend services safely during the pandemic, the church turned to Wachter.

Wachter's team integrated easy-to-use technologies so the church could live-stream its church services. Wachter also installed a digital mixing console and directional antennas to provide a best-in-class experience within the sanctuary.

These solutions required Wachter to design an expandable solution that would allow for easy integration with the church's existing components.

The Results

Wachter's audiovisual upgrades now provide the church with a high-quality audiovisual system to make attending church services safe and captivating.

This new system was installed within two weeks and within budget. The church enjoys its new modern audiovisual experiences for the sanctuary and for members who chose to worship online.
