

“Stacking Applications™” On Your Nurse Call System

DID YOU KNOW...

That several major nurse call systems include a CenTrak Real Time Locating System (RTLS) Infrastructure?

If so, you may have a RTLS infrastructure that supports **ROOM LEVEL** location certainty in patient rooms.

With ROOM LEVEL certainty, you have a base infrastructure to add applications like staff duress, hand hygiene, infant security and asset management very cost effectively.

📍 Location Certainty Is:

A feature of the CenTrak RTLS infrastructure that identifies an object or person’s position within a defined clinical space with high precision, even as they move throughout the facility.

ROOM LEVEL

provides the ability to virtually pinpoint a location, not an estimated location of staff, patients or equipment to a specific room or space: like a patient room, or soiled/clean utility room

What applications can be “stacked” on a CenTrak nurse call cancel infrastructure?

- **Staff Safety and Duress**
Improve clinician safety with a fast, accurate system
- **Hand Hygiene Compliance**
Improves immediate visibility to prevent the spread of infection, and increases patient safety
- **Asset Tracking and Management**
Minimize time spent searching for patient care equipment and prevent loss/theft
- **Infant Security**
Provide peace of mind with a reliable, cost effective solution that does not reside on Wi-Fi.

Contact us today to see if your nurse call infrastructure can “stack” RTLS applications!
