

ELSAG® VPH900

FOR PARKING MANAGEMENT

INTEGRATE THE ELSAG® VPH900 WITH YOUR IP CAMERAS FOR PARKING MANAGEMENT EFFICIENCIES

The ELSAG® Video Plate Hunter 900 (VPH900) is a parking management software that integrates automatic license plate reader (ALPR) technology with a variety of IP video cameras commonly used in parking lots and garages.

Now, parking lot owners and parking management companies can increase the efficiency of permit validation, lot/garage inventory, fee payment, enforcement, and security systems by utilizing license plate reader data to find suspect vehicles faster and to aid investigations.

Once integrated with IP video cameras, the VPH900 system creates data records from video and digital photos of license plates:

- › License plate number of every vehicle
- › Date and timestamp for the entry and exit of every vehicle, calculating time

Each license plate number is automatically and instantaneously compared to hot lists and white lists to aid parking management and enforcement.

- › White lists contain plate numbers of permitted vehicles. If the VPH900 system reads a plate number that's not on the white list, alarms generate in real time to parking enforcement for immediate investigation.*
- › Hot lists contain plate numbers of vehicles of interest such as those with expired permits or vehicles belonging to delinquent payors.

* For real-time alarm capabilities, you must network the ELSAG VPH900 to the ELSAG CarSystem or ELSAG Enterprise Operations Center data management system.
