

## TDSP Discretionary Charges

### Switch Types

In ERCOT, you must select what time of switch you need.

The Options are:

- Priority Move-In
- Move-In
- Self-Selected Switch
- Standard Switch

As a reminder, permits **MUST** be in place first before service can be turned on for the customer. This is a utility/city requirement.

Priority Move In- commonly known as PMVI's, are usually processed the same day or the next business day. They are submitted for the date on the contract. Priority move ins across the board can take up to 1-3 business days depending on the utility and queue. If there is not a meter at the location the process can take up to 7-10 business days.

Move In- Standard Move in orders are processed in 2-3 days and are submitted for the date on the contract. Engie is the exception states up to 20 days for move in.

Self-Selected Switch- Self-selected switches are processed to occur on the start date listed on the contract. Most occur same day or up to 1 business day.

Standard Switch - Standard switches usually occur 2-3 days from date listed on the contract. This is the standard type of switch.
