# Several Top-selling Products Get Even Better with the Inclusion of GS Global Factor Index

## New **GS Global Factor Index** provides exposure to Value, Momentum, Low Beta and Quality factors

Created by Goldman Sachs, the all-new GS Global Factor Index dynamically allocates to global equities and U.S. bonds in addition to a hypothetical cash investment.

How is it different? The equities come from a global basket of stocks with exposure to Value, Momentum, Low Beta and Quality factors. The GS Global Factor Index further allocates exposure between equities and bonds based on a key economic indicator, adjusting for anticipated economic growth or decline.

In addition, the equities component of the index takes into account certain investability considerations, such as the market liquidity and turnover of its component stocks. U.S. bonds are represented by a 10-Year U.S. Treasury Rolling Futures Index.

Finally, GS Global Factor Index targets 5% volatility with the goal of providing more consistent performance over time.

## Products include top-selling Accumulator Plus

GS Global Factor Index debuts on our top-selling FG AccumulatorPlus® Fixed Indexed Annuity among others.

All products will include both 1- and 2-year interest crediting options. Availability varies by product and state.
