More choice, volatility control flexibility added to top-selling F&G Power Accumulator™

Balanced Asset 5 offers clients uncapped par rates as high as 125%

With the addition of the Balanced Asset 5 Index, an already strong, top-selling F&G product is getting even better.

It debuts on F&G Power Accumulator™ 10 Fixed Indexed Annuity (FIA) with uncapped participation rates up to 125% on a Two-year Point to Point option. And what's even better, those rates are guaranteed to never dip below 100%.

Power Accumulator™, the only ETF-centric FIA on the market, now includes two volatility control indices. Along with the ETF-based allocation options, clients can add volatility control to the mix targeting 10% and now 5% volatility.

It offers your clients choice and offers you another compelling angle to introduce a one-of-a-kind FIA.

Like its predecessor, the new Balanced Asset 5 Index manages risk using BlackRock iShares® Core S&P 500 ETF (IVV) and BlackRock iShares® 20+ Year Treasury Bond ETF (TLT).

This index is designed to:

- Earn interest based partly on the growth of a strategic mix of equity and fixed-income assets to reach both short- and long-term investment goals
- Provide transparent, low-cost diversified exposure
- Offer a flexible portfolio that can take advantage of market movements and daily liquidity

“F&G” is the marketing name for Fidelity & Guaranty Life Insurance Company issuing insurance in the United States outside of New York. Life insurance and annuities issued by Fidelity & Guaranty Life Insurance Company, Des Moines, IA.

Interest rates are subject to change.

Volatility control seeks to provide smoother returns and mitigate sharp market fluctuations. While this type of strategy can lessen the impact of market downturns, it can also lessen the impact of market upturns, potentially limiting upside potential.

In calculating the level of the Balanced Asset 10 index and level of the Balanced Asset 5 index, the index methodology deducts a maintenance fee of 0.85% per year, calculated daily. This fee will reduce the level of each Index and thus the amount of interest, if any, that will be credited to any Product. Furthermore, while the volatility control applied by CIBC as part of the index methodology may result in less fluctuation in rates of return as compared to indexes without volatility controls, it may also reduce the overall rate of return for products referencing one of the Indexes as compared to other indexes not subject to volatility controls.
