Let Rego Be Your Guide

# ServiceNow IT Business Management Scenario Planning

Facilitate Informed Funding Decisions Based on Scenario-Based Plans

Are you struggling with portfolio resource and budget optimization in ServiceNow?  
Let Rego assist with your ITBM Scenario Planning implementation.

ServiceNow's robust Scenario Planning functionality gives organizations the ability to create scenarios with a collection of demands and projects for the selected fiscal period. By comparing different scenarios, businesses can make informed funding decisions.

Once scenarios are compared, and the best option is chosen, a plan is created for the fiscal period. Teams can then track and manage the plan throughout the fiscal period.

## Features:

- Build scenario-based plans for portfolios
- Test different combinations of demands and projects in planning scenarios
- Edit the way demands and projects are funded for each scenario
- Review budget details such as actual and planned costs, projects, and demands not aligned to goals and strategies, and actual costs for the projects
- Compare different scenarios to assess outcomes of various project and demand combinations
- Confirm a planning scenario that best aligns organizational objectives with your current portfolio plan
- Override a previously confirmed planning scenario by adjusting its priorities and environment
- View resource utilization and allocation
