- Q&A

### What is the Rally Adapter for Jira?

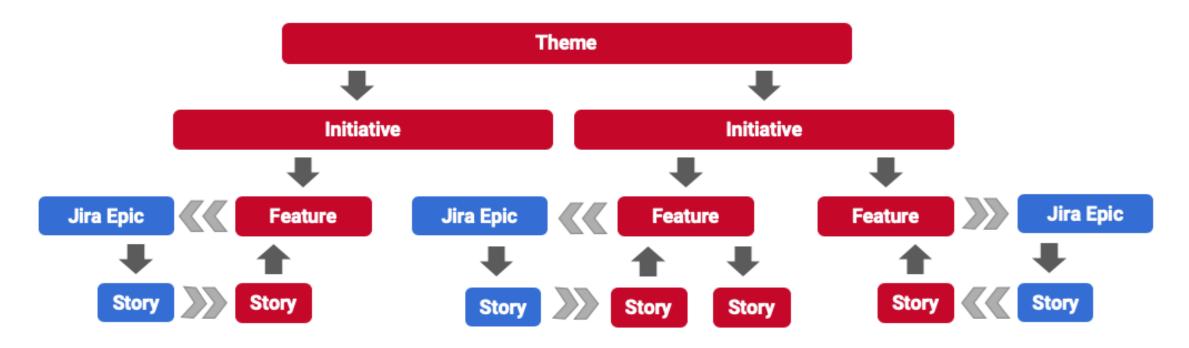

Connect Rally and Jira teams to promote team autonomy while maintaining visibility into the data and status that matters most.

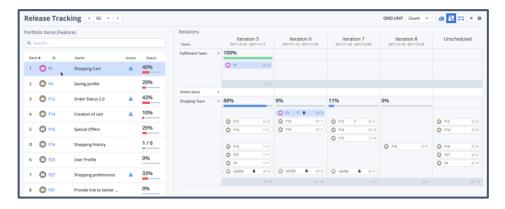

### Visualizing and Tracking Work

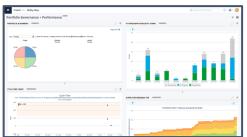

Visualize and track work across your organization's Jira instances and projects in line with your Rally teams, providing a comprehensive view of planned and in-progress work across your execution teams.

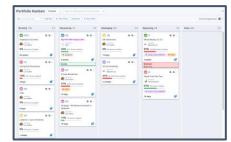

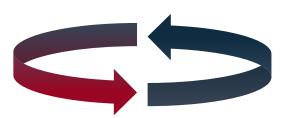

Balance developer preference with accountability to the business and improve scaled agile practices with teams in Rally and Jira

## Coordinate **Program Level**Efforts In **Rally**

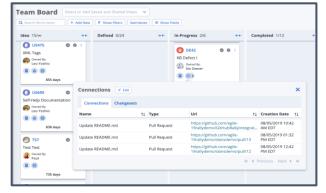

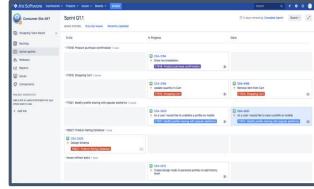

# Team Planning and Execution In Rally or Jira

# Have the data at your fingertips from the entire organizations to make informed decisions in real-time

Map Multiple

Jira Instances

Story
Syncing from
Jira to Rally

Flexibility to
Account for
Team Changes

Sprint Syncing on Stories from **Jira** to **Rally** 

Dependency Mapping and Syncing

### Security and Monitoring

- 100% On Premise installation and support managed through Replicated \*\*
- Integration service consists of docker containers in a kubernetes cluster
- Integrated Rally apps to monitor the exchange of data between Rally and Jira
- Browser interface used for setting up integration configuration
- Continuous polling to check for updates from external systems.

### Recommended Services Engagement

- Coaching and Integration Design
- Installation
- Configuration
- Testing
- Team Onboarding
- Training

#### Why choose the new Rally Adapter for Jira???

**NEW!!!** 

Rally <u>Adapter</u> For Jira

Advanced Features for Teams Practicing **Agile at Scale** 

**EXISTING**Rally Connector For Jira

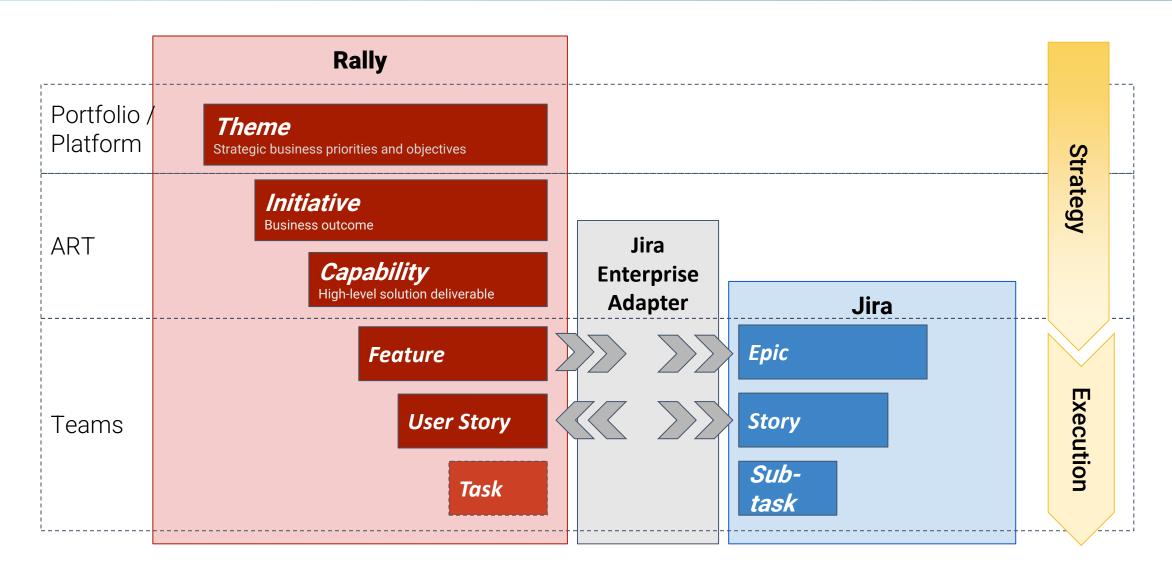

**Defect Management** Use Cases

\*Official partnership with OpsHub, and their Jira integration is still available via our reseller agreement as an alternative option

#### Adapter Support Details

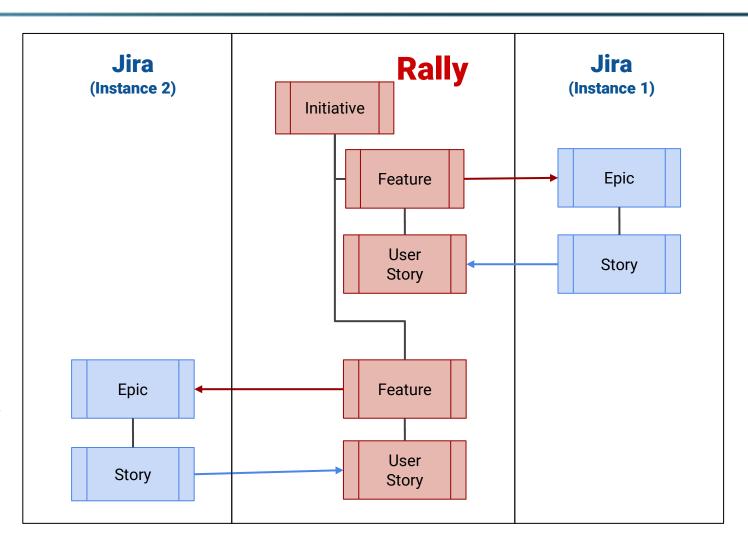

- Feature and Story syncing bi-directionally between Rally and Jira, can also sync defects (or other JIRA custom issue types) from Jira to Rally as stories (\*sub Tasks in Jira are not synced)
- Multiple Jira instances and projects mapped to a single Rally workspace
- Continued mapping after initial set-up to accommodate the normal adjustments in the people/team structure of your organization
- Timebox matching between Rally and Jira based on naming conventions
- Regular Expression value mapping
- Large scale integration with centralized configuration
- Integration monitoring via Rally Apps

#### Portfolio Item/Artifact Hierarchy [aka. the Work]

#### Recommended Workflow

- Create/originate Features in Rally that are synced into JIRA Epics.
- Epic updates may flow back from JIRA to Rally if there is some execution team refinement of feature data expected.
  - While not required, ideally features **should** be originated in Rally if that is where planning is taking place.
- In some scenarios, the execution teams want to clone a feature, or break a feature into multiple features in JIRA.
  - If this scenario is prevalent, then Features/Epics may originate in both systems.
- Depending on where the execution teams like to break down their features/epics, Stories can originate in JIRA or Rally.
- If stories only originate in JIRA, there is likely not value in syncing stories or updates from Rally to JIRA, so a unidirectional sync is recommended.

### ValueOps - Value Stream Management

Value Stream Management enables organizations to optimize their end-toend flow of value

**Value Stream Management** 

*Alignment – Efficiency – Effectiveness* 

**Strategic Portfolio Management** 

Digital Product Management

**Agile Program Management** 

**Agile Teams** 

**Collaborative Work** 

Boeing is a large corporation with a myriad of teams that have to work in unison. To make sure that the funding is yielding the expected ROI, and that teams deliver on time and that customer regulatory demands are met we use ValueOps from Broadcom to match progress data from the teams with business objectives from the executives: - Lynda Van Vleet - Boeing

We need to have visualizations of analytics for the entire value stream, that may consist of teams outside of the defined hierarchy in Rally to eliminate blindspots" Agile and DevOps are key transformation practices for software delivery teams, but they are not enough. VSM helps teams identify waste and focus on value while providing end-to end visibility to all stakeholders from planning to production" - Forrester
