CONFERENCING INSPIRATIONS

TRENDS

PEOPLE. SPACES. TECHNOLOGY.

Returning to work means returning to in-person meetings, but the spaces where people meet is going to look much different. Traditional conference and collaboration rooms will undoubtedly have fewer chairs, new health and safety protocols, and social distancing requirements. This change coupled with the hybrid workforce trend that is likely to continue indefinitely means it's time to start rethinking the spaces where people conference and collaborate. Legrand | AV has identified three trends that are likely to shape the way integrators and designers approach conferencing and collaboration spaces in the next three to five years.

CONFERENCING INSPIRATIONS

TREND: FLEXIBLE MEETING SPACES

TREND: TECHNOLOGY FOR HYBRID COLLABORATION

TREND: ENHANCED REMOTE USER EXPERIENCE

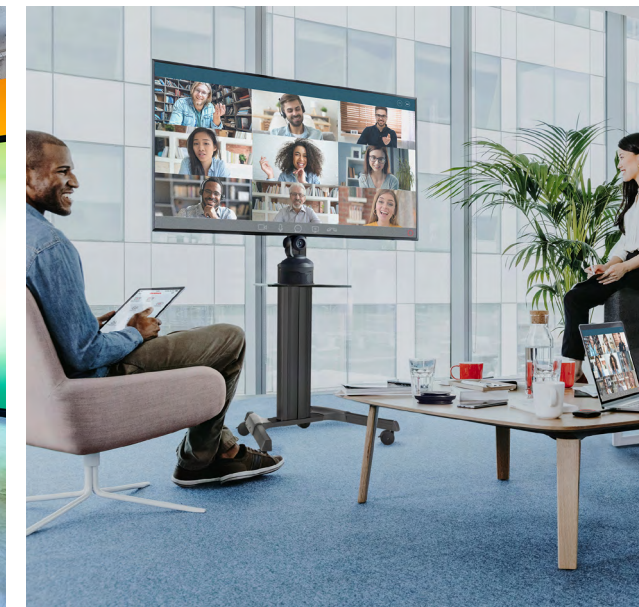

FLEXIBLE

FLEXIBLE MEETING SPACES

SPACES

Fewer chairs in every conference room will inevitably lead to meetings in otherwise common spaces. Occupancy limitations will also further the trend of remote participants. Imagine being required to stay home on the day of a big meeting because the largest conference room only holds half as many people as it used to. The physical space and remote engagement challenges are met by making every office space as multifunctional and AV-friendly as possible. Expect to see the use of mobile carts with audio/video equipment for conferencing anywhere to become the most flexible, cost-effective way to collaborate in any space.

TECHNOLOGY FOR HYBRID COLLABORATION

TECHNOLOGY

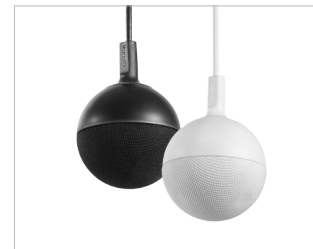

Technology solutions designed for the hybrid workforce are here to stay. The fact is, there is expected to be a 3-fold increase in the long-term work from home workforce. Permanent and semi-permanent conference spaces must be designed or retrofitted with AV technology that provides a rich, seamless collaboration experience for in-person and remote participants. Expect to see sophisticated AV equipment built into conference room furniture, multiple microphones on the table or in the ceiling, and the use of professional cameras for multi-angle shots of the presenter, participants and content.

ENHANCED REMOTE USER EXPERIENCE

PEOPLE

Innovation, problem-solving and collaboration require deep engagement by all participants whether in-person or remote. And now more than ever, the people on the call are equally as important as the people in the room. The right AV technology in a hybrid conferencing and collaboration space can enhance the user experience, elevate performance and improve meeting results. Expect to see displays, cameras and microphones mounted in every conference space, video hubs for multi-user content sharing and adapter dongles in shared workspaces.
