# PLANNING & SCHEDULING

Work Management Processes for Maintenance Seminar

PRODUCTIVITY + AVAILABILITY = HIGHER PROFITABILITY

## Need to improve maintenance performance?

Effective planning and scheduling is one of the quickest and most effective return on investment strategies that your organization can utilize to increase productivity and availability, which in turn yields higher profitability. In just three days, you can begin to put into practice proven processes and methodologies to streamline your maintenance performance. See immediate results.

### LEARN HOW TO:

- Increase equipment availability and reliability
- Drive improved site safety
- Significantly improve maintenance effectiveness
- Break the reactive cycle with proactive planning and scheduling
- Develop and implement efficient work management processes
- Capture the knowledge of your current workforce to help train new workers
- Drive quality maintenance activities with detailed plans to drive performed precision maintenance

### 100% MONEY-BACK GUARANTEE

We guarantee overall quality with a 100% money-back guarantee on the course fee. See the registration page for details.

### You should attend if you:

- Plan maintenance activities
- Coordinate production activities
- Manage or supervise maintenance personnel
- Schedule maintenance work
- Manage planner schedulers
- Administer the CMMS
- Are a stakeholder in maintenance activities
- Purchase or store maintenance parts/materials
- Are responsible for equipment availability

## Rave Reviews:

"Great Course! Enjoyed the experiences of the instructors and other classmates. This course should be offered more often and on-site refreshers or "crash" courses for upper management at plants. Material was delivered in a clear and concise manner by true subject matter experts. Hope to attend other courses that may apply to my professional growth. Thanks again."
