

## CLIENT Success Story

“ **For years, Edenton Boatworks has used acetone in various ways in our process. We consume about 50 percent of the acetone leaving the remainder to be disposed of as hazardous waste and be recycled.**

We found a few recycling companies but the transportation costs were prohibitive. We searched for a recycling unit that would fill our needs.

We took the next step with CBG Biotech. They were helpful and proactive in providing the service we needed. They also offered to test our waste acetone. We sent the dirtiest acetone in the plant. The recycled product they returned exceeded our expectations.

Based on price, performance and excellent customer service, we purchased a SolvTrue<sup>™</sup> S1500 unit from CBG Biotech. It was delivered before promised and installed with no problems.

We have been operating our S1500 for 5 months and it has exceeded our expectations. The estimated ROI was approximately one year. At the rate we are going, we will see enough savings to pay for the unit in 7-8 months.

Our recycled product is cleaner and less expensive than what we had before. We also no longer store several drums of hazardous waste waiting to be recycled.”

– Edenton Boatworks
