EQUIPMENT

## FALCON CAMERA SYSTEM

Information and  
Specifications

# CAMERA SYSTEM

The Falcon Camera System has been developed primarily to assist in the extraction process. The live feed which is transmitted back to the LCD screen mounted in the cab enables the operator to continue working through all weather conditions and adverse terrain and eliminates the need for any worker to be put at risk on the hillside or extraction zone.

The Falcon Camera System comes in a purpose designed box utilising the high strength properties of BISPLATE 80 with yield strength three times that of standard steel. Rugged external construction combined with internal protective electrical shock absorption gives the Falcon Camera System maximum reliability in the harshest of environments.

## LCD DISPLAY FEATURES

- GPS Information
- Distance From Grapple to Hauler
- Altitude +/- From Landing
- Battery Voltage
- Accurate Longitude/Latitude Readings For Operational Zones & Emergency Situations

## CAMERA

- Infrared For Low Light Operation
- Anodized Solid Aluminium Housing
- Auto Shading Lens For High Contrast Environments
- 100% Triple O-Ring Sealed Housing

## BATTERIES

- Two Lithium Batteries
- 10 Hour Run Time Per Battery
- 24 Volt Charger Yarder Charge Station
- Wall Charger Provided

## TRANSMITTER

- 9 Channel 2.4Ghz Unit
- Transmits Up to 900m (Line of Site)
- Push Button Channel Changer For Easy Use
