

# Helping Communities Respond to COVID-19

*Use Activate Care's Community Coordination Tools in your COVID-19 Response Strategy*

Communities across the country are taking rapid steps to protect the health and safety of their residents and to mitigate the spread of COVID-19. Many healthcare agencies, municipalities, first responders, and others are now working together in order to combat the virus. A primary challenge for these groups to successfully collaborate and track cases of COVID-19 is a shared collaboration platform. Effective immediately, Activate Care is offering our CareHub™ with Team-Based COVID-19 Monitoring Toolkit to all communities coordinating a response.

## **Establish visibility across healthcare and community systems**

The Activate CareHub™ platform provides a HIPAA-compliant shared space designed to facilitate tracking, coordination, and communication among medical and non-medical partners in your community's response strategy. We offer one place for patient and project-centered task management, asynchronous messaging tools, and a single location for documenting outreach interactions that all entities can share.

Our Team-Based COVID-19 Monitoring Toolkit includes the CDC-Screening Tool, tools to track COVID-19 test results, date of most recent test, and patient level of risk. You can add any hyperlinked shared documents or treatment protocols you may need to share across entities.

## **Activate Care offers video for:**

- Remote Assessment
- Virtual Check-Ins
- Consultations
- Virtual Visits
- E-Visits
- Care Conferences

Since 2012, Activate Care has created innovative technology solutions that integrate health and social care for better outcomes that last. We're here to help your community.
