In order to run BIM$CGRX in a dynamic partition, you must add the following
to your SVA list, assuming you have the BIM-GSS 5.3A sub-library in your PHASE
LIBDEF CHAIN:

BIM$CGSV,SVA

or add the following immediately after the BIM$INIT execution during IPL:

SET SDL
BIM$CGSV,SVA
/*

The above is only necessary if you run BIM$CGRX in a dynamic partition. If
it is in a static partition, BIM$CGSV will be loaded into the SVA automatically.
If you have any questions, contact CSI BIM-GSS support.
