<h3>BIM-GSS IMOD IPSERVER BROWSER INTERFACE FORM</h3>
<hr />
<form method="POST" action="HTTP://xxx.xxx.xxx.xxx:yyyy/BIM$CGIC">
<input type="HIDDEN" name="IMOD" value="BIMTCPIM">
IMOD1: <input type="TEXT" name="IMOD1" value=""><br /><br />
TEST1: <input type="TEXT" name="TEST1" value=""><br />
TEST2: <input type="TEXT" name="TEST2" value=""><br />
TEST3: <input type="TEXT" name="TEST3" value=""><br />
TEST4: <input type="TEXT" name="TEST4" value=""><br />
TEST5: <input type="TEXT" name="TEST5" value=""><br />

<input type="submit" value="Start" >
</form>
</center>
</body>
</html>
```

```
note:   In order to use this interface you must be running DATA21's IPSERVER
        browser and either BSI's or CSI's TCP/IP stack on the VSE machine you
        wish to access IMODs through.  You must define the phase, BIM$CGIC,
        to CICS as a program, language ASSEMBLER, execkey of CICS, and to use
        ANY storage.

        You must also be running the BIM-GSS phase, BIM$CGRX, in a partition
        on the VSE machine.  Please see the BIM$CGRX text file for more information.

        The following variable shown above must be used and is described as
        follows:

        IMOD    -       Name of the IMOD to be executed.  For
                        IMOD execution, this must be BIMTCPIM.  For
                        other uses the IMOD must contain up to 8
                        alphanumeric characters only.

        You must make sure that IMOD is the first variable and should remain hidden.
        IMOD1 needs to contain the name of the actual IMOD you wish to execute.  TEST1
        through TEST5 are just for demonstration purposes.
```
