

## DEPLOY, RUN AND CONTROL MORE EFFICIENT PROCESSES

iGrafX Process Automation provides business groups the agility and control to deploy their own processes with efficient automated workflow. Create reliable, repeatable processes that reduce costs and lead times, maintain transparency into the process performance, and allow businesses to quickly adapt to change brought on by process improvement, regulatory requirements, or continuity and resiliency plans.

Key Feature	Benefit
Model-Driven Design	Easily deploy graphical process models to executable applications without programming
Industry and process best practices	Accelerate design time by leveraging a library of templates for multiple industries and specific processes.
Business system integration	Integrate tasks and data from your existing IT investments in ERP, ECM and more for smooth, user-friendly workflows.
Personalized Task Lists	Ensure process adherence and efficiency with step by step, prioritized task assignments for process participants.
Ad-Hoc Task Visibility	Allow and track process exceptions and adapt processes accordingly.
Status Monitoring	Get insight to process and / or problems with snapshot views of process status. Understand work queues and allocate resources accordingly.
Process Performance	Perform analysis of process performance trends using personalized dashboards and plan future process improvement.
Compliance & Control	Stay informed of process adherence through comprehensive queries and facilitate audits with detailed reports demonstrating compliance.
Business Continuity	With automated tasks, the work can continue even when the people are not available.

iGrafX Process Automation is ideal for organization requiring:

- Standardized processes
- Rapid Deployment
- Easier workflow
- Improved Transparency
- Demonstrated Compliance
- Continuity & Resiliency
- Reduced IT time and cost

Accelerate process design with best practice template:

- Sales
- Services
- Human Resources
- Finance
- Information Technology
- Quality Management
- Process Management
- Manufacturing
- Logistics
- And more...

## Reduce cost and lead times with clear distribution of tasks

Automated processes guide work in progress through sets of deliberate steps that have been thoughtfully designed to meet business goals and compliance requirements. Make sure that process participants can efficiently complete each step and that no task falls through the cracks by delivering prioritized lists of tasks for work in progress.

Personalized views provide clear information to each employee and checkpoints along the way, helping move processes along more quickly and ensuring appropriate hand-offs. A live view of the process model assists process participants with understanding where they are in the process of each process instance.

Management views provide transparency into how transactions are progressing, allowing for quick intervention if there is an issue or bottleneck. Data collected from processes can be used as the basis for analysis and continuous improvement.

## Empower the business to define, deploy and adapt efficient processes.

iGrafX Process model-driven design ensures the seamless synchronization of models and real-life deployment of process workflow.

By simply describing how work needs to be done in a graphical process model, business groups can bring their processes to life as an executable application without programming, giving them agility they often lack in IT-driven process implementation projects.

As business factors change, processes can be quickly adapted to keep the business delivering to their objectives

## Looking for a Jump Start with iGrafX?

Leverage our expertise for a higher ROI. Our training and consulting services can help you apply the power of iGrafX even faster. For more information, please visit [iGrafX.com/services](http://iGrafX.com/services).

iGrafX works with the Global 2000 with a focus on large, complex challenges, high degree of regulatory requirements, and the need for continuous business improvement.
