

EMPOWER YOUR CAREGIVERS TO FOCUS ON OUTCOMES, NOT CONNECTIVITY

7SIGNAL AGENTS

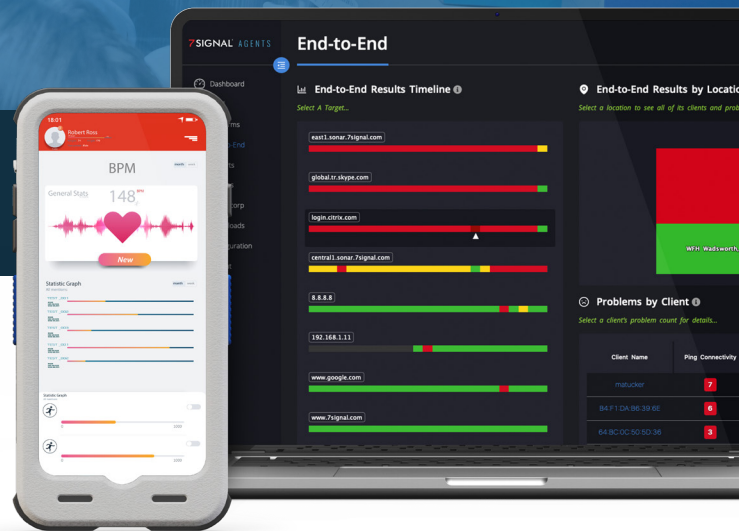

PROVIDE SUPERIOR PATIENT CARE BY ENSURING THRIVING WIRELESS EXPERIENCES FOR MEDICAL DEVICES, WORKSTATIONS ON WHEELS AND MORE.

Doctors and nurses should not need to worry about how their wireless medical devices and workstations connect to the network when trying to access critical care information, patient records and more. Stress, strain and a call to the help desk negatively affects caregiver productivity and their ability to provide patients with a satisfactory experience. 7SIGNAL Agents offer a proactive solution for digital experiences.

As a wireless experience monitoring application for devices, 7SIGNAL Agents provide detailed visibility into the strength and health of your medical devices' Wi-Fi connections. This software client that runs directly on devices operating on Windows, Mac, Android or Linux, and enables your hospital or health system's technology staff to monitor and measure how devices are connecting to your facility's network and to proactively address connectivity and device experience issues to facilitate better patient care.

Approximately 55% of hospitals spend up to 500 hours on Wi-Fi maintenance to address connectivity issues. By incorporating 7SIGNAL across a fleet of patient care devices, that time can be cut considerably — enabling you to offer fast, reliable Wi-Fi to caregivers and better outcomes for patients.

OUR CLIENTS

BENEFITS OF 7SIGNAL AGENTS

- ✓ Compatible with variety of clinical IoT devices including those from Zebra, Spectralink, Honeywell and more
- ✓ Proactively monitor and address connectivity issues before caregivers complain
