SOLVING CONNECTIVITY ISSUES FOR YOUR REMOTE WORKFORCE

7SIGNAL® | MOBILE EYE®

When employees and teams work remotely, your networking infrastructure and performance tools cannot help you address their connectivity issues.

All the disparate Wi-Fi networks and devices can result in remote application crashes, skyrocketing help desk requests, team member frustration and plummeting productivity.

Rather than accept these issues as status quo, organizations around the world trust Mobile Eye™ from 7SIGNAL. By providing fast and actionable root-cause connectivity data for Windows®, Android® and macOS® devices, Mobile Eye makes managing devices and Wi-Fi easier, enabling greater productivity throughout the remote enterprise.

**100% visibility into wireless devices—no matter the network**
Mobile Eye provides timestamped feedback on the most common connectivity issues such as roaming, coverage, congestion and interference, allowing you to find and fix the root causes of user Wi-Fi problems quickly.

Fast and easy SaaS deployment for the enterprise
Mobile Eye is device and access-point agnostic and deployed via the installation of a discreet background application on end user devices. The low-impact app is easy on processing power and battery life and offers customized controls for network monitoring and management.

Cloud dashboard makes troubleshooting easy
Mobile Eye logs and stores performance history for up to 30 days, allowing you to analyze trends and solve issues faster by managing network connections, data transmission rates, channel connections and more.

BEGIN YOUR FREE TRIAL

Experience the #1 solution for addressing connectivity issues among remote enterprises

Install the patented Mobile Eye application on the device

Passive and active tests run on user devices discreetly, with no impact on performance or productivity

Find and fix connectivity issues as they happen to ensure optimal performance of applications and devices
