

Scenario Planning and Forecasting in Sage 200

Your business is dealing with a dynamic and challenging operating environment. You need a strategic planning tool that lets you react to change quickly. ProForecast's easy to use cloud-based platform brings speed and flexibility into the modelling of WhatIf scenarios and forecasting.

Modelling

Harness ProForecast's detailed modelling capability. Add depth to your forecasts to stay ahead of the game in finance, sales, workforce, inventory management and beyond.

Collaboration

Plan as a team and plan with agility and depth. Permission based edit and viewing rights allow admin users to allocate role specific access to all the stakeholder in the business.

Analytics

Drive business performance with custom dashboards. A rich data visualisation layer allows you to create charts and reports and drill downs. Track your performance against your forecast with Variance Reports and Rolling Forecasts. Drag and Drop technology makes reports easy to personalise and share.

Rapier AI

ProForecast's proprietary AI engine analyses your historic data and pre-populates your forecast with all products and product groups, COGS, Sale Price, Units Sold and Seasonality. As you bring in your actuals the forecast is extended across the full period being forecast.

Management Reporting

Access easy to use management, financial and sales reporting software from any device anywhere.

Board Reporting

Deliver stunning and instantly updated management reports. Adapt the content for your audience.

Integration

Easily connect to Sage 200 and import all your financial and management data for fast, reliable, and accurate business planning, via our Sage Authorised Sage 200 integration. Import your actuals each month to create rolling forecasts and variance reports.
