

# ORDER-CENTRIC

VERSUS

# TRADITIONAL

---

COMPARING 2 TYPES OF TMS

---

Order-centric TMSs offers a holistic view of the supply chain.

.....

Easily and flexibly integrated with the OMS for enhanced transparency and control over the shipping process.

.....

Native support for multi-modal, multi-leg freight for unprecedented levels of flexibility and configurability.

.....

Management by exception for enhanced decision-making, prompt in-line actions, and superior customer service.

Traditional systems operate in silos.

.....

Cumbersome integration, often via batch-like processing. Requires additional custom software purchase for OMS communication.

.....

Often requires additional software purchase and implementation for each mode or leg expansion.

.....

Management by "track and trace." Requires additional software to enhance visibility and to take actions based on this visibility.
