

Second Colony DRaaS

probax.io/secondcolony

Accelerate recovery times and eliminate complexity to ensure applications are running 24/7

DISCOVER VEEAM CLOUD CONNECT

FUNCTION

If a VM becomes unavailable or fails in case of a disaster, you can fail over to a VM replica and quickly restore services in the production environment. Users can then access services & applications they need with minimal disruption.

NETWORKING MADE EASY

The built-in Veeam Network Extension Appliance streamlines communication between production VMs & VM replicas on the cloud host, backup infrastructure & external network nodes.

COOL IN A CRISIS

1-click failover orchestration for reliable, quick execution. Instigate full site and partial site failover to the Probax DR site from anywhere using Probax Hive.

OVERVIEW

Second Colony (DRaaS) is powered by Veeam Cloud Connect Replication technology, and enables organizations to replicate their virtualized environment to our enterprise grade infrastructure in any of our availability zones worldwide.

Accelerate recovery time (RTPOs < 15 minutes) by removing the complexity and challenges of using traditional disaster recovery solutions.

Second Colony
Disaster Recovery as a Service
