TRANSPORTATION MANAGEMENT SOFTWARE
## for small parcel and LTL

Product Overview

Competing successfully in today's ever-changing marketplace requires companies to achieve strategic advantages over their competition. One key approach is for companies to improve their logistics, distribution and transportation management capabilities. FASCOR's TMS delivers such advantages for Small Parcel and LTL transportation management and execution that improves customer service, creates better control over cost and improves a company's bottom line.

FASCOR TMS is a proven solution for today's demanding business applications, enabling companies to ship customer orders quickly, easily, and with 100% accuracy with integration to virtually any ERP system or WMS.

Benefits

- One system for all small parcel and LTL carriers simplifies shipping process and delivers maximum resource utilization
- Certified by UPS, FedEx and others, TMS ensures carrier compliance & eliminates carrier charge-backs while facilitating best and least cost selection of services through Rate Shopping.
- TMS Business Rules Manager (BRM) allows customers to implement unlimited rules to enforce internal policies, routing instructions and or customer requirements
- Open, powerful and state of the art integration tools allows deployment in virtually any environment
- Highly scalable, TMS is capable of supporting an unlimited number of locations and users
- Integrated Bar Code technology reduces data errors, processing time & paperwork while improving shipping accuracy
- Integrated with FASCOR's WebTools Reporting and Dashboard tools, TMS can provide an entire organization the critical data it needs to make better decisions and ensure maximum customer service

FLEXIBLE powerfull

Transportation Management Software
for small parcel & LTL   TMS

Product Capabilities

Scalability & Configurability
TMS can be deployed as a stand-alone workstation or across a distributed organization. Web based, deployment is easy and user friendly while delivering a broad set of capabilities to users.

Carrier Compliance
TMS is a carrier certified solution providing maximum flexibility to leverage various shipping options. Users can depend on TMS for proper shipment labeling, documentation and end of day electronic communication with the respective carriers. With TMS, there's no reason to have multiple shipping solutions anymore.

Advanced Automation
TMS provides advanced automation capabilities, including integration within line sortation systems and print and apply systems. System API's may also be used for deployment in "Black Box" implementations. Used in concert with FASCOR's WMS, customers can leverage advanced order planning to determine optimal cartonization of orders while choosing best carrier/service through automated processes.

Reporting & Query Options
TMS delivers a variety of reporting and inquiry tools to enable system users, including customers, to access and leverage the wealth of data available. Standard and custom reports are supported through WebTools module. TMS also includes a robust query building tool that allows users to find exactly the set of data they need, all of which can be exported in standard file formats like Excel (CSV).

International Documentation & Haz Mat Processing
For companies that ship to international destinations or that ship hazardous materials, TMS delivers all of the most recent carrier-approved options including required documentation and labeling for both types of shipments.

System Integration
TMS offers an comprehensive set of communication and integration options to meet virtually any challenge. State of the art API's support a wide range of options including COM, XML, TCP-IP, ODBC and simple file transfers for real-time bridges to other internal system regardless of their platform or purpose. If a requirement stretches the standard capabilities of TMS, FASCOR's Professional Service Team can build a custom interface based on client requirements.

Specifications

System Compatibility
- Windows 10
- Microsoft SQL Server

Carrier Support
- UPS™ (UPS Online® Compatible)
- FedEx™
- United States Postal Service™
- Endecia (USPS)
- Less Than Truck Load (LTL)
- Regional & Local Carriers
- Parcel Consolidators

Host Connectivity
- Rest API
- COM
- TCP-IP
- Batch File
- ODBC

Printing
- Carrier Labels for Zebra and Laser printers using JPG/WMF formats
- International Documentation (PDF)
- Carrier Shipping Manifests (PDF)
- VICS Bill of Lading (PDF)
- Standard & Custom Reports (PDF)

Features
- System "Ship To" Address Book
- System user management & security
- Advanced Shipment E-mail Notification
- Web Enabled Desktop Shipping and Inquiry
- Rate Shopping with Least Cost Carrier Selection
