

RESULTADOS CLINICOS DE 2 PLATAFORMAS MULTIFOCALES HANITA MF – OCULENTIS Mplus

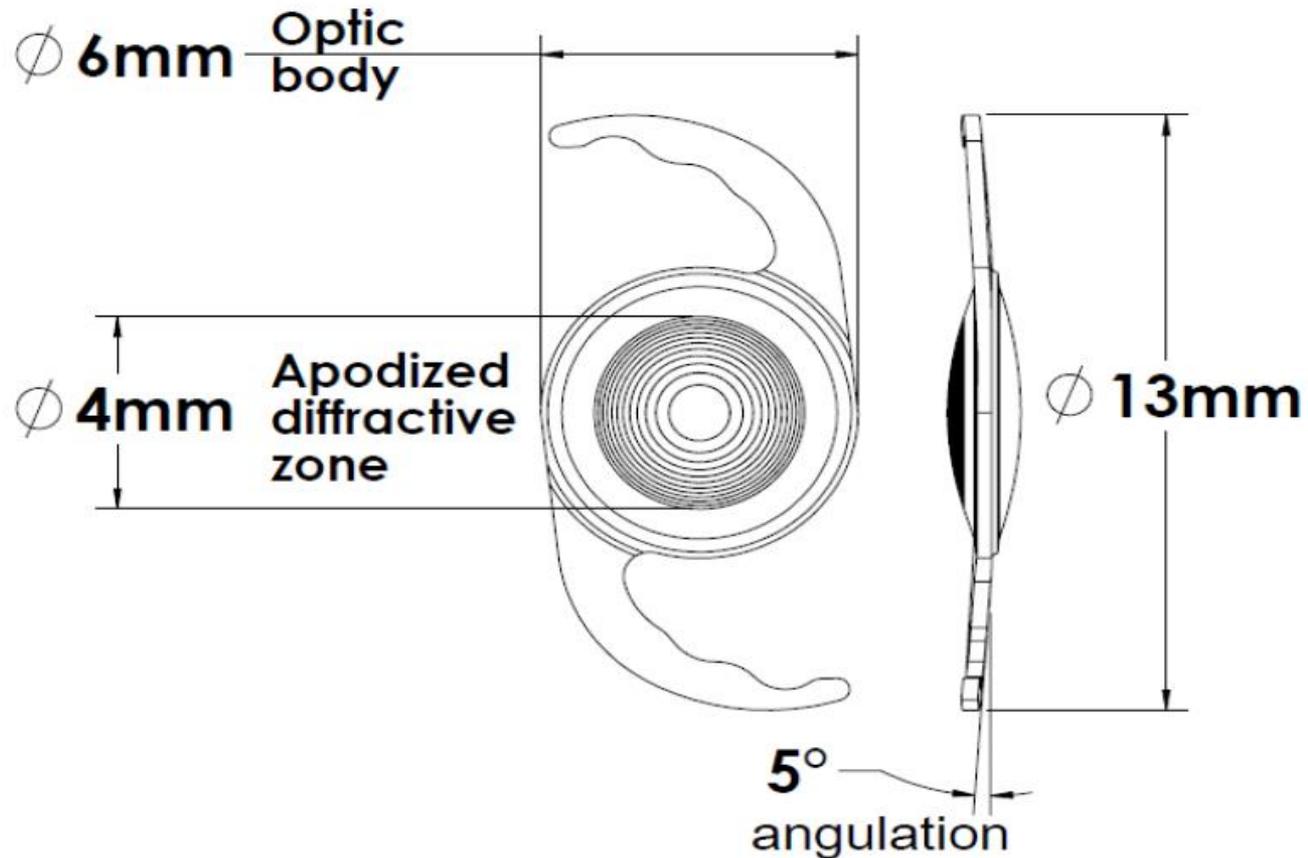

LUIS GUILLERMO PAPARO M. MD
ZULMA VALERO F. OD

Unidad de Cornea y Cirugía Refractiva VISUALASER Centro Medico Imbanaco
XII Congreso Internacional de Oftalmología
Cali, Mayo 2013

CARACTERISTICAS

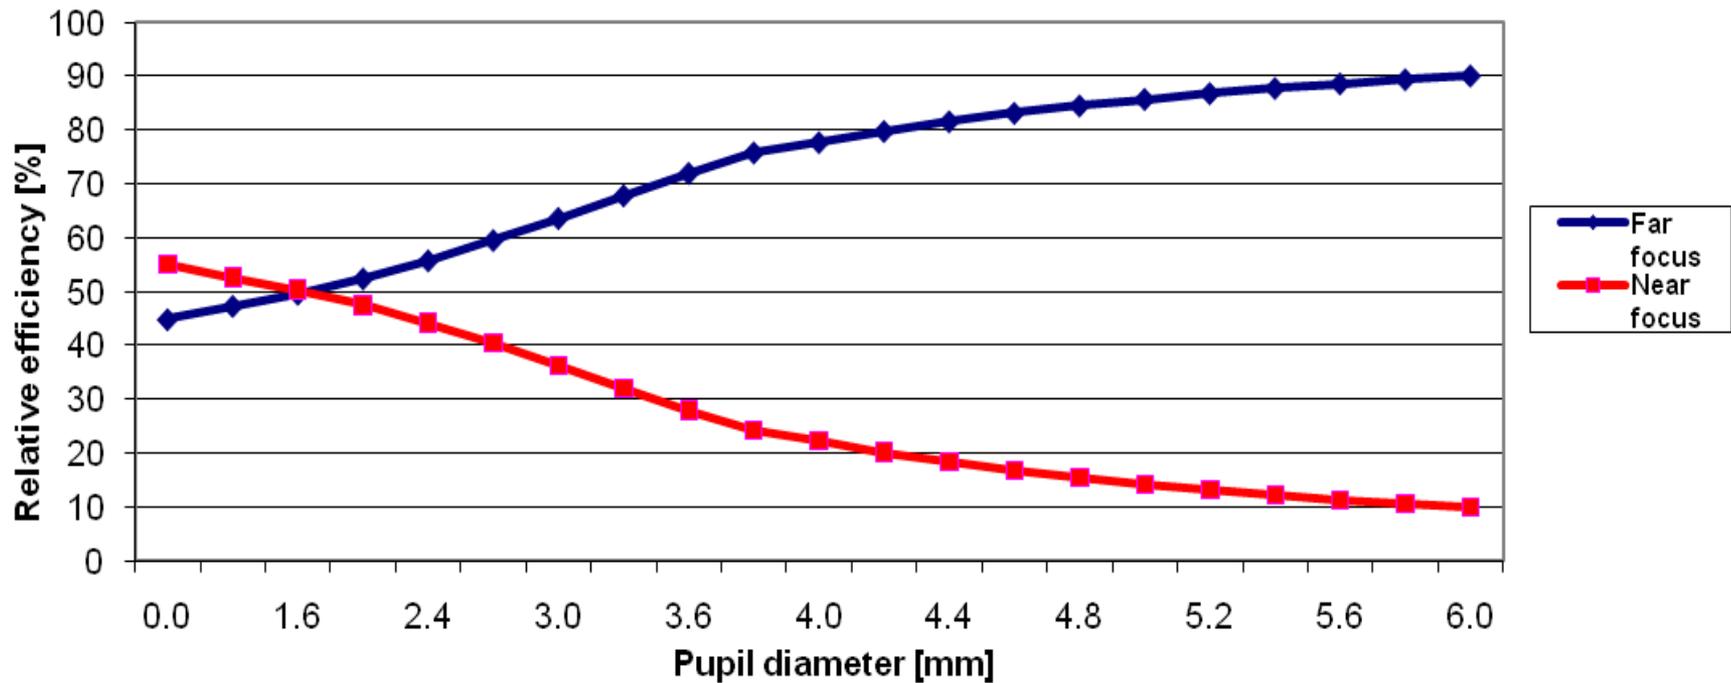

Geometry	Total Diameter: 13mm Optic Diameter: 6.0 mm Haptic angulation: 5º	
Square edge	360º double square edge	
Material	Hydrophilic acrylic with UV-blocking and violet filtering chromo pore Refractive index: 1.46(35ºc)	
YAG laser	Compatible	
Power range	+10 to +30 (0.5D increments) +30 to +35 (1D increments)	
Addition	+3D	
Incision size	1.8mm	
Placement	Capsular bag	
Estimated A constant	118.6 IOL master (SRK/T)	

CARACTERISTICAS

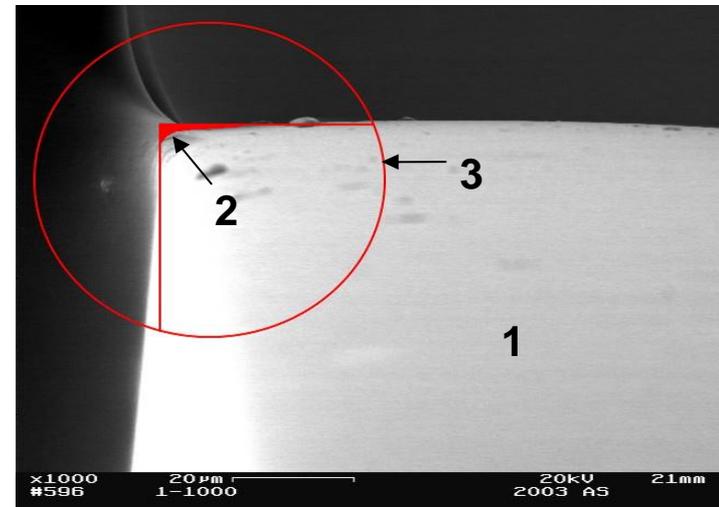

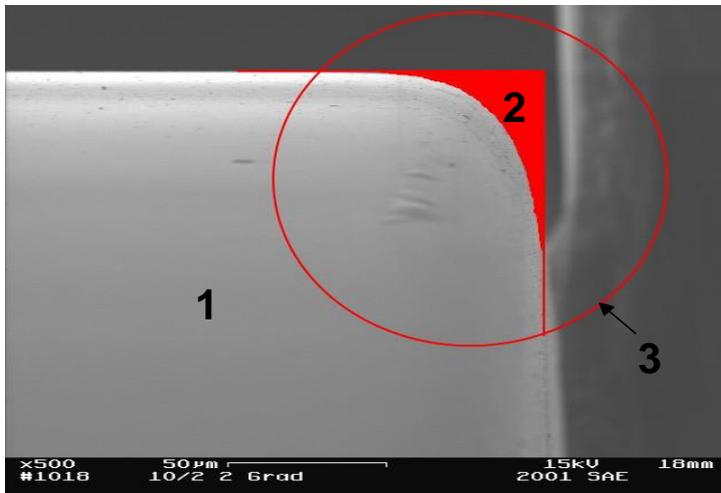

DISTRIBUCION DE LUZ

Energy distribution between far (blue) and near (red) vision

DOBLE BORDE CUADRADO

- LIO Multifocal Asferico Difractivo Apodizado
- Para alcanzar la precisión requerida de los escalones difractivos no debe haber pulimiento (no polish)
- Esto significa que los bordes cuadrados tampoco deben ser pulidos

1 - LIO
 2 -Area- Desviación ángulo de 90°
 3 -círculo de referencia

Better PCO prevention results for IOLs with “square edges”, regardless of material.

Schauersberger J, Amon M, Kruger A, Abela C, et al. Comparison of the biocompatibility of two foldable intraocular lenses with sharp optic edges. *J Cataract Refract Surg* 2001; 27:1579-1585.

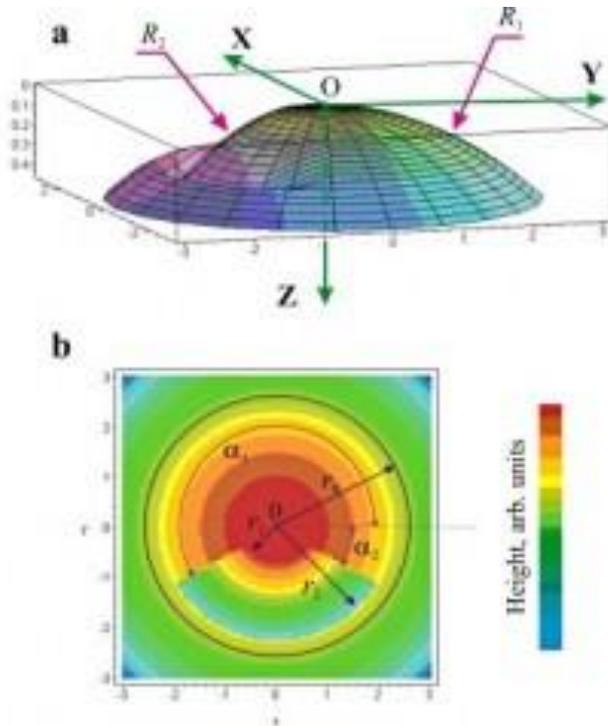

Buehl W, Findl O, Menapace R, et al. Effect of an acrylic intraocular lens with a sharp posterior optic edge on posterior capsule opacification. *J Cataract Refract Surg* 2002; 28:1105-1111.

OCULENTIS Mplus

- Lente acrílica “hydrosmart”
- 11.00 mm x 6.00 mm
- +0.0 D a + 36.0 D (0.5D)
- Incisión 2.4 mm
- Asfericidad en superficie posterior
- Bordes cuadrados en 360
- Zona de visión lejana asimétrica esférica con una zona de visión cercana sectorial Add + 3.00 D
- Diseño concebido para evitar reflejos y saltos de imagen originados por reflexiones en condiciones de luz escotópica
- Independiente de la pupila ?

CARACTERISTICAS

- Combina dos zonas esféricas con distintos radios de curvatura
- Los centros de curvatura de las 2 superficies están en el eje Z, para que no haya un desplazamiento de imagen.
- Cuando la luz incide en el área de transición de los segmentos sectoriales se reflejara lejos del eje óptico para prevenir difracciones e interferencias, menor perdida de intensidad de luz
- Menos efectos de halos e imágenes fantasma

METODO

Estudio prospectivo, no aleatorizado, 20 ojos , 10 pacientes implantados bilateralmente

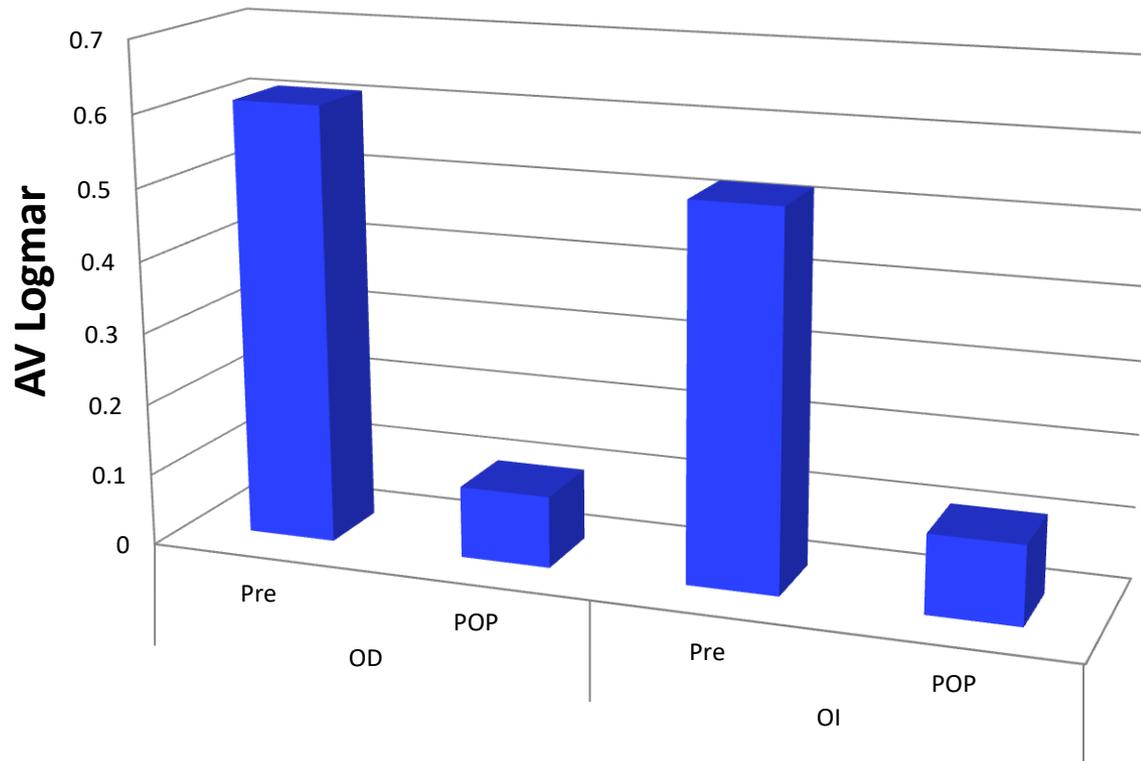

Criterios de Inclusión:

- Edad: 50 a 75 años
- Corneas sanas, <1.00D de astigmatismo regular.
- Fondo de ojo sano

Criterios de exclusión:

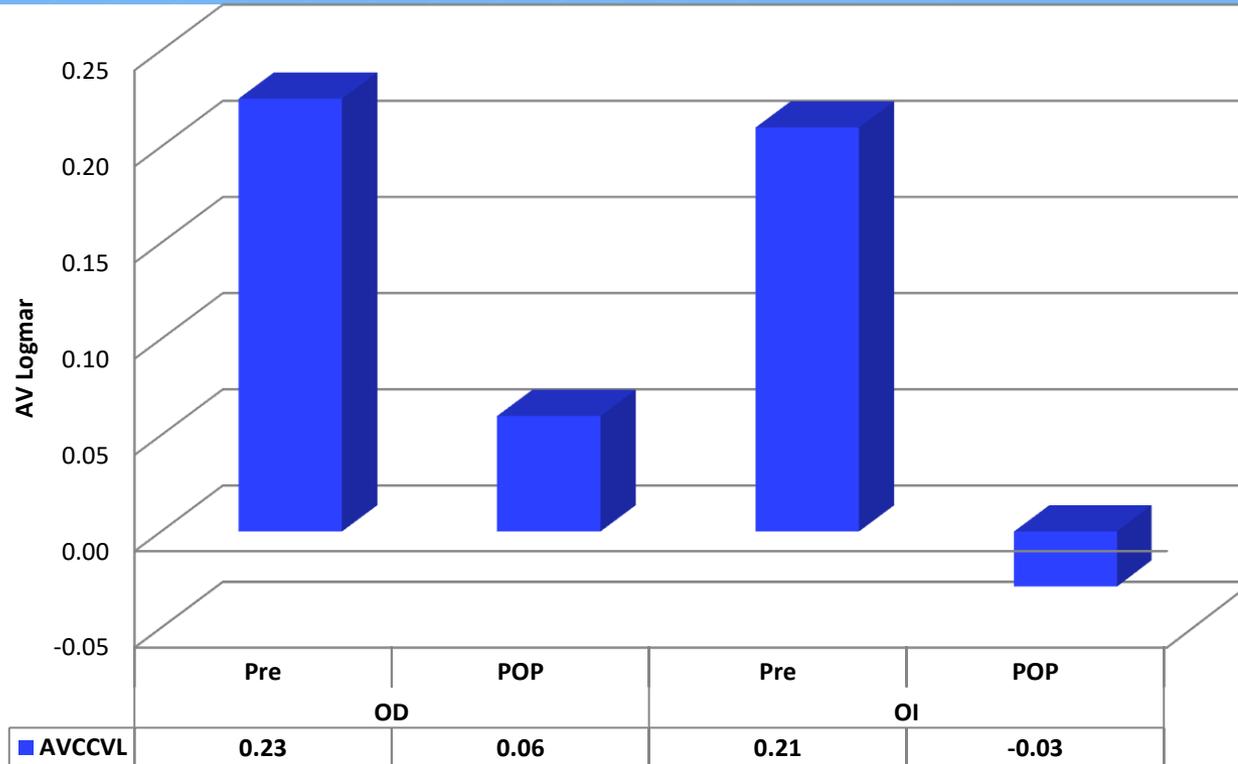

- Antecedentes oculares/cirugía de cornea, trauma ocular.
- Capsula que no este sana
- Antecedente de enfermedad ocular diferente a catarata.
- Cualquier otra condición ocular que contraindique la implantación.

ESTUDIO CLINICO

48 ojos study group (SEELENS MF) y 37 ojos control group(SN6AD1)

Van der Linden et al. Comparison of a hydrophilic and a hydrophobic apodized diffractive multifocal intraocular lens. Int Ophthalmol 2013

Fig. 1 Mean uncorrected visual acuity up to 6 months after surgery. At all time-points measured post-operatively the study group and the control group performed equally in terms of uncorrected distance visual acuity and were not statistically significantly different

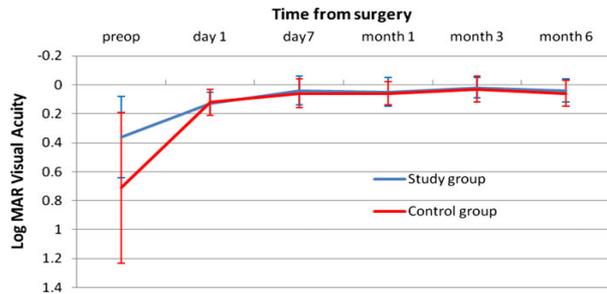

Fig. 2 Comparison of the post-operative corrected distance acuity up to 6 months. The difference between the groups is small but statistically significant in favor of the study group ($p < 0.019$)

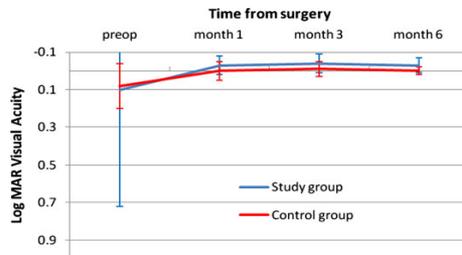

Fig. 3 UNVA at 40 cm at different time-points in the follow-up period. The study group and the control group perform equally well. There were no clinical or statistically significant differences between the groups

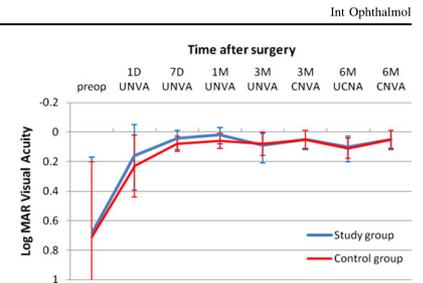

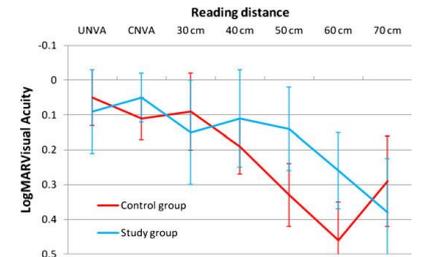

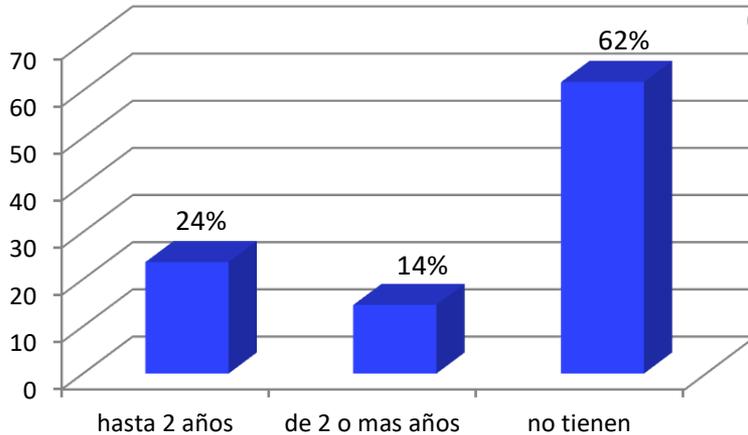

Fig. 4 Difference in near acuity at different distances with or without correction. There is no clinical or statistical difference for the 30 and 40 cm distance between the study and control groups. However, there is a clinical and statistically significant better reading at 50 and 60 cm for the study group ($p < 0.03$ at 50 cm and $p < 0.007$ at 60 cm)

CONCLUSIONES

- Estas nuevas plataformas muestran buenos resultados en visión lejana intermedia y cerca, después de cirugía de catarata.
- Al comparar la curva de desenfoque con el desempeño de otros lentes, se encontró un mejor comportamiento, principalmente en visión intermedia.¹
- Durante el seguimiento (2 años SEELEN MF) no se presentó opacidad capsular, esto puede deberse al diseño óptico de borde cuadrado. Se debe hacer mayor tiempo de seguimiento.
- Implantación por microincisión (2.0 mm)
- Es necesario medir otras características de calidad visual para consolidar el desempeño óptico de estas nuevas plataformas

OBJETIVO

- Evaluar los resultados refractivos y de calidad óptica en los pacientes a los cuales se les implanto el nuevo lente Multifocal Asférico Apodizado, Acrílico, Hidrofílico (Hanita MF, Israel), después de cirugía de catarata por micro incisión.
