

LEGIONELLA

GAIN A QUALIFICATION

Landlords have a responsibility to assess the risk of exposure to Legionella ensuring the safety of their tenants.

This course/qualification will enable you to carry out Legionella risk assessment in a variety of premises.

- Give a comprehensive overview of the main legislative and guidance documents relative to the control of Legionnaires disease and the disinfection of water systems.
- Briefly describe the basic properties of water.
- Explain what is meant by the term Legionellosis, Legionnaires Disease and Legionella bacteria including: The background to the disease / What is the cause of the disease and how it is transmitted / Sources of the bacteria / How to manage and control the risk of Legionellosis.
- Provide information on how to carry out the cleaning of cold and hot water systems.
- Explain the basic cold and hot water design principles and risks associated with Legionella.
- Provide practical guidance on how to carry out a risk assessment of cold and hot water systems in a building and make recommendations to rectify problems.

**The cost of this course is
