

Digitalize FOH Efficiency

With the Ziosk Notification Platform customers can choose which notifications are relevant to them and develop integrations with their existing systems to deliver messages to wearables, phones, and other connected devices. Ziosk has partnered with JTECH to deliver notifications directly to their devices; however, the messaging platform is vendor-neutral which enables customers and third parties to integrate with platform.

The Ziosk Notification Platform enables alerts from the Ziosk tablet to be delivered to restaurant staff so they can respond to guest needs and improve the guest experience in real-time.

Notifications Available Now

Survey Response: Notification based on response to guest survey. *(For example, alert the manager when a guest reports a problem with their meal.)*

Printer Issue: Notification when the Ziosk tablet is out of paper or encounters a printer error.

Low Battery: Notification when the Ziosk battery level reaches a configurable threshold and needs to be recharged.

Coming Soon

E-Club Signup: Notification when a guest signs up for E-Club or Loyalty.

Call Server: Notification to the server when a guest presses 'Call Server'.

Table Cleared: Notification to the host stand when a table is cleared and ready to be seated.

Check Paid: Notification to the host stand when check is being paid.

Order Placed: Notification to the server when items have been ordered or reordered.
