The Phishing Simulation Service

Phishing attacks have been one of the most common threats a business could face for a number of years now, but with new tactics and trends continuously emerging, modern email security services still struggle to keep pace, resulting in malicious messages bypassing these protections and reaching potentially vulnerable users.

When **just one click** could be enough to irreparably damage your data, finances, reputation and more, the security awareness of these users becomes a pivotal element of your security strategy.

Put your employees' detection to the test

The Phishing Simulation Service allows you to test how your employees' would respond to a real phishing attack - without the real consequences.

By leveraging email and landing page templates mimicking those observed in genuine attack campaigns, you can gather valuable insights that will help you to combat user awareness vulnerabilities; for example, how many users would click on a link within a suspicious email, opening the door to potential **malware**, and how many users would actually enter their credentials into a spoofed login page, increasing the risk of **account takeover**.
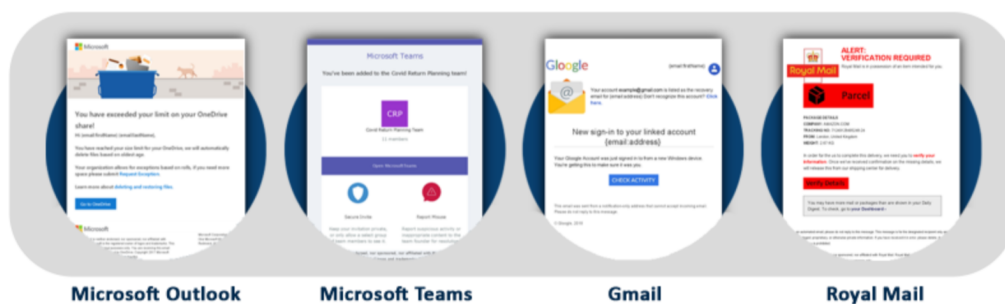

The step-by-step process

Starting your Phishing Simulation is easy, with valuable data delivered to you in just three simple steps!

1. Sign Up

Visit **www.info.altinet.co.uk/phishing-simulation-service** to sign up for the Phishing Simulation Service, selecting one of the four following email templates.

Microsoft Outlook   **Microsoft Teams**   **Gmail**   **Royal Mail**

2. Consultation Call

One of our technical engineers will get in touch for a 30 minute consultation call, during which they will gather your user email list, verify your domain, and plan the schedule for your simulation to take place.

3. Follow-Up

After the simulation has taken place we will have a follow-up consultancy session in which we share a personalised report highlighting the key insights gathered from the simulation campaign.

Developed using Barracuda Phishline technology.

Barracuda Phishline teaches users to understand and respond correctly to the latest phishing tactics and trends through levelised training, customisable simulations, and engaging gamification.
