

CASE STUDY

Build Your Complete ITS Solution Piece By Piece

This agency is doing just that: Alexandria Transit (DASH).

DASH represents a growing community of smaller agencies who have realized that investment in technology is critical to sustainability. And, like most other transit agencies, what stands between DASH and their desire for the most advanced ITS solutions is a lack of funding.

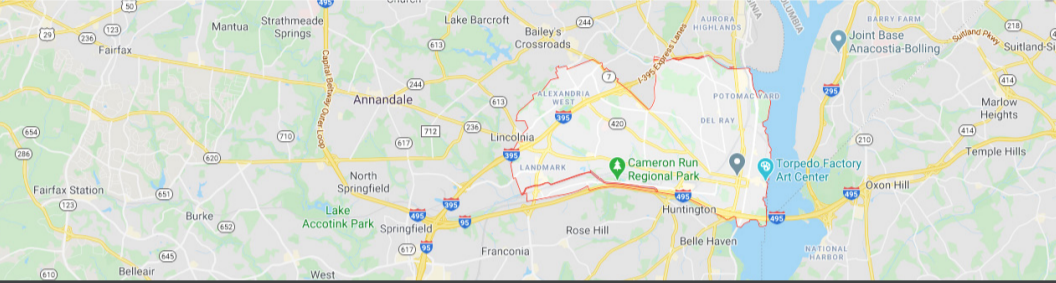

~86 buses
& 1 garage

~12k daily
passengers

Operates
10 routes

TAILORED TO YOU

DASH chose a phased approach to acquire the technology needed:

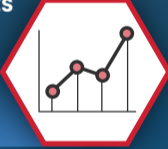

Deployed CleverCAD

Allowed DASH to have a view of their operations like never before

Deployed CleverReports

Allowed DASH to understand patterns in service that may need long term adjustment

Deployed SmartYard

DASH can pinpoint vehicle locations in the yard and optimize positions rollout, increasing on-time performance

Updated to IVN

DASH updated their existing technology to Clever Devices' state-of-the-art Intelligent Vehicle Network (IVNs).

Deployed BusTime

Kept customers informed and up-to-date regarding bus arrival times

Deployed APC and Ridecheck Plus

DASH can easily provide accurate NTD data to receive necessary funding for their services

LEARN MORE

Visit our website for more information about why DASH chose to expand their ITS solution with Clever Devices.

"We are expanding our capabilities gradually and the platform that we've got allows us to do that much faster and more easily than if we would have to go out procure from a new vendor for every single piece of the pie."

— Tristan Cunningham, DASH
