

# Next generation of patient support programs

[www.careteam.tech](http://www.careteam.tech)  
Your next step in digital health™

# PROBLEM: New treatment options exist, but patients are often confused and overwhelmed

# PROBLEM: This complexity creates unnecessary consequences

Slow access to treatment

## Why?

1. Patients or MD didn't realise patient was clinically eligible
2. There is a complex process to access reimbursement
3. Takes many steps and tests to confirm eligibility

**“Drugs do not work in patients who do not take them”**

*C. Everett Koop former surgeon general*

Issues with adherence

## Why?

1. Patients focused adherence is not as good as helping them distribute accountability - family and support to ensure they take the medication and do the follow ups

Poor health outcomes

## Why?

1. Gap between what could be and what happens is hard to understand as no data
2. Patients are not sure what to do in case they are not feeling well

## OPPORTUNITY: Enhanced patient experience that improves outcomes and business objectives

Patients have **Faster Access** through a streamlined onboarding process.

With easier access, increase **total number of patients** on the drug.

**Increase adherence** to treatment with shared accountability and visibility.

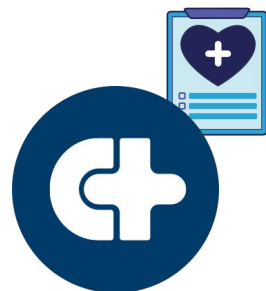

Gather **Real World Evidence** to be able to plan and adjust your approach.

# **SOLUTION:** Careteam's patient-centered platform connects everyone in one place, focused on enabling a clear action plan

**Patient Services  
Nurse Educator**

Personalised Action  
Plan based on best  
practice templates

**George Berger**  
patient  
75 yr old

*Supported  
Optimistic  
Clear on next steps*

**Marie Berger**  
wife

*Confident with  
resources to support  
her husband*

**Lisa Berger**  
daughter

*Know where she  
can help her dad*
