Precautions.....

Safety Tips.....

- Please read this manual carefully before using the camera.
- Avoid damage from stress, violent vibration or liquid intrusion during transportation, storage or installation.
- Take care of the camera during installation to prevent damage to the camera case, ports, lens or PTZ mechanism.
- Do not apply excessive voltage. (Use only the specified voltage.) Otherwise, you may experience electrical shock.
- Keep the camera away from strong electromagnetic sources.
- Do not aim the camera at bright light sources (e.g. bright lights, the sun, etc.) for extended periods of time.
- Do not clean the camera with any active chemicals or corrosive detergents.
- Do not disassemble the camera or any of the camera's components. If problems arise, please contact your authorized dealer.
- After long term operation, moving components can wear down. Contact your authorized dealer for repair.

Connection Instructions.....

1. Connect included Power Supply to the camera.
2. Wait for camera to come to Home Position.
3. Connect included USB 3.0 cable to camera and USB 3.0 port of PC (unit is also backwards compatible with USB 2.0 port).
4. Select and configure camera in your software of choice.

NOTE: Failure to follow this sequence may result in no connection to PC.

Care Of The Unit.....

Remove dust or dirt on the surface of the lens with a blower (commercially available).

Installation Instructions.....

Desktop Installation.....

When using the HuddleCam™ on a desk, make sure that it will stand level. If you want to use the camera on an incline, make sure the angle is less than 15 degrees to ensure that the camera's pan and tilt mechanism operates normally.

[Tripod Installation.....](#)

When using the HuddleCam™ with a tripod, screw the tripod to the bottom of the camera. The tripod screw must fit below specifications:

Note: Tripod must stand on a level surface.

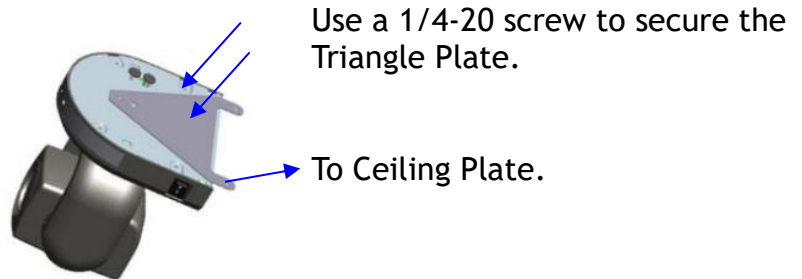

$$\varnothing = 5 - 7 \text{ mm}$$

Ceiling Mount.....

Step1: Secure the Ceiling Plate to the ceiling.

Step 2: Fix the Triangle Plate to the camera.

Step 3: Connect the Triangle Plate to the Ceiling Plate.

Step 4: Lock the set screws.

[Troubleshooting.....](#)

| Problem | Cause | Resolution |
|--|---|---|
| There is no power to the camera. | Power adapter is disconnected from mains or from camera. | Check the connections between the camera, power adapter and mains. If anything is disconnected, reconnect it. |
| | Power switch is set to OFF. | Set the power switch to ON. |
| Camera will not connect to the PC via USB. | USB cable is bad. | Try new USB Cable |
| | Camera connects sometimes. | Connect USB only after camera has completely booted. |
| Camera unable to pan, tilt, and/or zoom. | Menu is currently displayed on the screen. | Retry after exiting the menu. |
| | Pan, tilt or zoom range limit was reached. | Try to pan/tilt/zoom in the other direction. |
| Remote control not working. | The “camera select” button on the remote control is not set to match the “IR select” switch number set on the camera. | Choose the correct “IR select” number to match camera settings. |
| Camera cannot be controlled via VISCA. | The connection between the PC and camera is incorrect. | Refer to Cable Connection Info section of this manual. |
| | Commands being sent are incorrect. | Refer to VISCA manual. |
| The Camera is not working at all. | No response or image from camera. | Disconnect power, and wait a few minutes, then connect the power again. Retry. |

Important Notes Regarding USB Connectivity:

USB 3.0 ports are backwards compatible with USB 2.0 devices. USB 2.0 ports are not completely forward compatible with USB 3.0 devices (some USB 3.0 devices will connect to USB 2.0 with limited functionality).

External USB hubs should be avoided (i.e. give the camera its own USB port on the device) as they are not well suited to transmitting HD video reliably.

USB extension systems must be fully compatible with the version of USB that you are using and must utilize an external power supply, when required. Caution: Some “compatible” USB 3.0 extenders do not actually have the full 5Gbps bandwidth required for uncompressed HD video - so check bandwidth specs. Always connect the HuddleCam directly to the device in order to associate the UVC drivers before attempting to use any extension system.

USB 3.0 power saving settings in the device’s operating system should be turned off completely for reliable USB 3.0 camera connectivity.

HuddleCam Cameras

All HuddleCamHD cameras utilize the UVC (USB Video Class) drivers that are built into Windows, Mac OS and Linux to stream HD video to your device via your device’s USB port (*USB 2.0 or USB 3.0 depending upon HuddleCam model*). When your device successfully recognizes the camera, your device will register the HuddleCam as an “imaging device”. You can see this in your Windows Device Manager program (type “device manager” into the Windows search tool) as shown in the screenshot, below:

In this example, you can see the HuddleCam model in use connected as a fully functional USB 3.0 device (HuddleCamHD) as well as a USB 2.0 device with limited functionality (USB2.0 Camera).

If your device has not connected to or has not recognized the HuddleCam as an imaging device (in which case, you may see a new “unknown device”, “Westbridge” or “CYTFX3” labeled device show up in Device Manager’s “Universal Serial Bus Controllers” section rather than in the “Imaging Devices” section), the HuddleCam will not be available to programs that utilize a camera. In this case, try restarting the device and reconnecting the camera via USB (*USB 2.0 or USB 3.0 depending upon HuddleCam model*).

152 Robbins Rd, Downingtown, PA, 19335, USA - HuddleCamHD.com | 1 800 - 486-5276

Similarly, you can see a connected device in System Information on a MAC. See screenshot below:

In this example, you can see the HuddleCam model in use connected as a fully functional USB 3.0 device “HuddleCamHD” as well as a “USB2.0 camera” with limited functionality (USB2.0 camera).
