Thank you for purchasing the HuddleCamHD SimplTrack Lite!

There is a firmware update available. The first firmware update for this camera requires a few additional steps, which we will go over below. The HuddleCamHD Tracking Software / firmware upgrade process requires a Windows PC.

Firmware Update Process

1. Power on your SimplTrack Lite and connect it to your network.
   Note: The SimplTrack Lite includes PoE. Do not double-power the camera through DC & PoE.
2. Install the latest HuddleCamHD Tracking Software ver 2.1.13.165 (Included in the zip folder).
3. Search the network for your camera in the **Online Device** section.
4. Once located, add it to the **Device Management** section using the **Add to Client** button.
   a. Click the **Add** button to confirm adding it to the Device Management section.
5. Select the camera, then click **Remote Configuration**, then select the **Upgrade** tab.
6. Click the **...** button to browse your PC for the included firmware file.
   Note: The firmware file is included in the zip folder.
7. After locating the file, click the **Upgrade** button to apply the firmware.
   Note: The upgrade process may take a few minutes. The camera will automatically reboot once the upgrade process is finished.
8. Select the camera, then click **Remote Configuration**, then select the **UN/PW** tab.
9. Click the **Reset** button to set the camera to Factory Default Settings.
10. This will disconnect the camera from the **Device Management** section. Repeat Steps 3 – 4a to return the camera to this section.
11. Congratulations! You've now successfully firmware updated your SimplTrack Lite.
