Preface

Thank you for using the HD Professional Video Conferencing Camera. This manual introduces the function, installation, and operation of the HD camera. Prior to installation and usage, please read the manual thoroughly. If you have any questions about the capabilities of the product, call our toll-free number 1-800-486-5276.

Precautions

- This product can only be used in the specified conditions in order to avoid any damage to the unit itself.
- Don't subject the camera to rain or moisture.
- Don't remove the cover. Removal of the cover may result in an electric shock. In addition to voiding the warranty. In case of abnormal operation, submit a ticket at help.ptzoptics.com.
- Never operate outside of the specified operating temperature range, humidity, or with any other power supply than the one originally provided with the unit.
- Please use a soft dry cloth to clean the unit. If the unit is very dirty, clean it with diluted neutral detergent; do not use any type of solvents, which may damage the surface.

Warning

Electrical Safety

Installation of an operation must be in accordance with national and local electric safety standards. Do not use any power supply other than the one originally supplied with this camera.

Polarity of Power Supply

The power supply output for this product is 12V DC with a maximum current supply of 2A. Polarity of the power supply plug is critical and is as follows:

Handling

- Avoid any stress, vibration, or moisture during transportation, storage, installation, and operation.
- Do not lift or move the camera by grasping the camera head. Do not turn the camera head by hand.
 Doing so may result in mechanical damage.
- Do not expose the camera to any corrosive solid, liquid, or gas to avoid damage to the cover which is made of a plastic material.
- Ensure that there are no obstacles in the pan or tilt ranges of the camera lens.
- Never power the camera on before installation is complete.
- **Do not dismantle the camera** PTZOptics is not responsible for any unauthorized modification or dismantling.

Warranty

PTZOptics includes a limited parts & labor warranty for all PTZOptics manufactured cameras. The warranty is valid only if PTZOptics receives proper notice of such defects during the warranty period. PTZOptics, at its option, will repair or replace products that prove to be defective. PTZOptics manufacturers its hardware products from parts and components that are new or equivalent to new in accordance with industry standard practices.

Supplied Accessories

When you unpack your camera, check that all the supplied accessories are included:

Camera	1
AC Power Supply	1
RS-232C Cable	1
IR Remote Control	1
Quick Start Guide	1
AAA Batteries	2
	AC Power Supply RS-232C Cable IR Remote Control Quick Start Guide

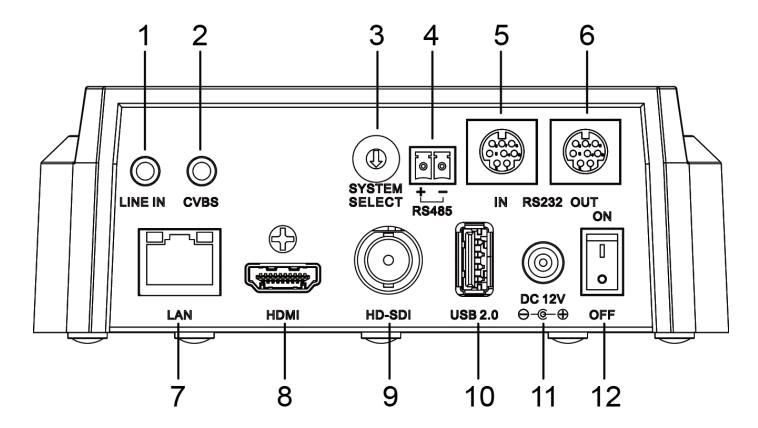

FCC Statement

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radiofrequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Warning - This is a class A product. In a domestic environment, this product may cause radio interference in which case the user may be required to take adequate measures.

Remote Control Battery Safety Information - Store batteries in a cool and dry place. Do not throw away used batteries in the trash. Properly dispose of used batteries through specially approved disposal methods. Remove the batteries if they are not in use for long periods of time. Battery leakage and corrosion can damage the remote control. Do not use old batteries with new batteries. Do not mix and use different types of batteries: alkaline, standard (carbon-zinc) or rechargeable (nickel-cadmium). Do not dispose of batteries in a fire. Do not attempt to short-circuit the battery terminals.

Connection Guide

- 1. Line In
- 2. CVBS
- 3. System Select Dial
- 4. RS485
- 5. RS-232 In
- 6. RS-232 Out
- 7. Network
- 8. HDMI
- 9. SDI
- 10. USB 2.0
- 11. DC12V
- 12. Power switch

3.5mm audio connection

3.5mm composite video connection

Video output resolution selector (See figure below)

2-pin phoenix connection for joystick controller

8-pin mini din connection for joystick controller

8-pin mini din connection for daisy chaining

RJ45 port for NDI®|HX & network streaming / control

HDMI ver. 1.3 connection

3G-SDI connection

Low level USB power (not recommended for use)

DC 12V power connection

Power camera on / off

SYS	SYSTEM SELECT DIAL			
0	1080p 60	8	720p 30

7	1080p 25	F	720p 59.94*	

After changing the System Select Dial, you will need to restart the camera to take effect.

*A, B, C, & F broadcast framerate options are considered BETA features and may not be supported by all platforms.

Features

Image Sensor

- o Panasonic 1/2.7", 2.07 million effective pixels, HD CMOS sensor.
- o Olympus high quality telephoto lens supporting 12X optical zoom and optional 16X digital zoom.
- o Full HD 1920x1080p resolution up to 60 frames per second.
- 2D & 3D noise reduction with our latest "low noise CMOS sensor".
- o 0.05 Lux @ F1.8 AGC On.
- Wide angle 72.5° horizontal field of view.
- Dynamic Range Control (DRC) for higher image quality and detail across simultaneously well lit and shadowed scenes.
- Image Freeze to temporarily pause the video while calling presets (so viewers won't see camera movement),
- High SNR (signal to noise ratio) of the CMOS sensor (≥55dB), combined with 2D & 3D noise reduction algorithms, effectively reduces noise, even under low illuminated conditions.

Video Outputs

- Simultaneous NDI[®]|HX / IP network streaming, 3G-SDI, & HDMI 1.3
- NDI®|HX Full HD network streaming up to 1080p 60 frames per second.
- 3G-SDI Full HD video output up to 1080p 60 frames per second.
- o HDMI 1.3 Full HD video output up to 1080p 60 frames per second.
- o RTSP, RTMP, & RTMPS streaming using H.264, H.265, or MJPEG.
- Line level audio embeds over NDI[®]|HX / network stream & HDMI. Uses AAC audio encoding for better sound quality and lower bandwidth usage.
- Support for ultra-high FPS mode (1280x720p @ 120 frames per second) over NDI[®]|HX & network streams.
- CVBS (composite video) output via 3.5mm connector (non-simultaneous, 480i or 576i resolutions)

Control and Settings

- NDI®|HX control through NDI® approved platforms that offer control
- PTZOptics VISCA over IP
- o IR Remote Control
- o Web-based IP remote control interface
- o RS-232 & RS-485 VISCA, Pelco-D, & Pelco-P control
- P/T/Z Preset Motion Sync

Installation

- Standard 1/4-20 female thread for camera mounting
- 12V DC 2A Power Supply
- PoE 802.3af

Warranty

5-year warranty

NDI® | HX with NDI® 4 Connection

The NDI®|HX connection allows you to connect and control your camera through any NDI® compatible hardware or software on your Local Area Network. Once your camera is setup on a LAN, you can utilize the NDI®|HX connection.

Two Easy Steps:

- 1. Download and install the latest NDI® Tools.
- 2. Select your camera within the NDI®|HX compatible device.
- Step 1. Download and install the latest NDI®|HX Tools from https://www.ndi.tv/tools.
- Step 2 (Optional). Configure your camera settings from the NDI Config tab in the camera's web interface.
- Step 3. Select your camera. The NDI feed will utilize the camera's device friendly name.

NewTek®, NDI®, NDI® 4, & NDI® HX are all registered trademarks by Vizrt Group®.

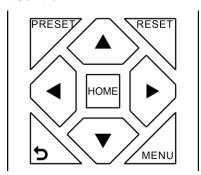

Please note that your NDI License key is non-transferrable.

IR Remote Controller Guide

To perform a command on the IR remote, press and release the button. A special note will be given when you can press and hold the button.

To perform a shortcut, press the buttons in a sequence when a right-angle bracket is shown. (>), or simultaneously when a plus sign (+) is shown.

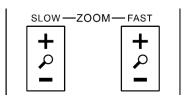

1. Pan & Tilt Control

Tilt Up: Press [▲]
Tilt Down: Press [▼]
Pan Left: Press [▼]
Pan Right: Press [▶]
Face camera to front: Press [HOME]

Press and hold the Up / Down / Left / Right buttons to continue panning or tilting. The camera stops as soon as the button is released, or the limit is reached.

2. Zoom Control

Zoom In: Press [+] Fast or Slow Zoom Out: Press [-] Fast or Slow

Press and hold the "-" or "+" button to continue zooming in or out. The zooming stops as soon as the button is released, or the limit is reached.

3. Focus Control

Auto Focus Mode: Press [AUTO]

Manual Focus Mode: Press [MANUAL]

Focus Far: Press [FAR]

Focus Near: Press [NEAR]

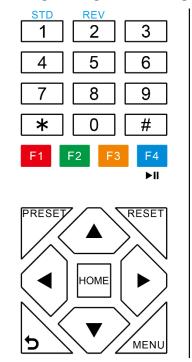

Press and hold the "Near" or "Far" button to continue focusing in or out. The focusing stops as soon as the button is released, or the limit is reached.

4. Backlight, L/R Set, & P/T RST Controls

Reverse Pan Control: Press [L/R SET] + [1]Standard Pan Control: Press [L/R SET] + [2]Backlight Compensation: Press [BACKLIGHT]Self-Calibration Test: Press [P/T RST]

5. Presets - Setting, Calling, and Clearing

Set Preset: Press [PRESET] > preset number

Call Preset: Press preset number

Clear Preset: Press {RESET} > preset number Clear ALL Presets: Press [*] > [#] > [RESET]

Note: No action will be executed when calling a preset that has not yet been saved.

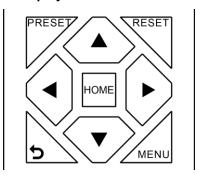

6. Image Freeze

Enable Image Freeze: Press [►II]
Disable Image Freeze Press [►II]

Note: After enabling / disabling Image Freeze, you will need to power cycle your camera to activate / deactivate the feature.

7. On Screen Display Menu Control

Open / Close OSD:

OSD Up:

OSD Down:

OSD Left:

OSD Right:

OSD Enter:

OSD Back:

Press [MENU]

Press [M]

Press [V]

Press [V]

Press [NOME]

8. Change Camera IR Address

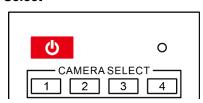

Address 2: [*] > [#] > [F2]
Address 3: [*] > [#] > [F3]
Address 4: [*] > [#] > [F4]

Note: Ensure that only one camera is 'listening' to the IR Address shortcut at a time. If multiple cameras receive the command, they will all change their IR address.

F4

9. Camera Select

Control IR address 1: Press [Cam Select 1]
Control IR address 2: Press [Cam Select 2]
Control IR address 3: Press [Cam Select 3]
Control IR address 4: Press [Cam Select 4]

10. Standby Control

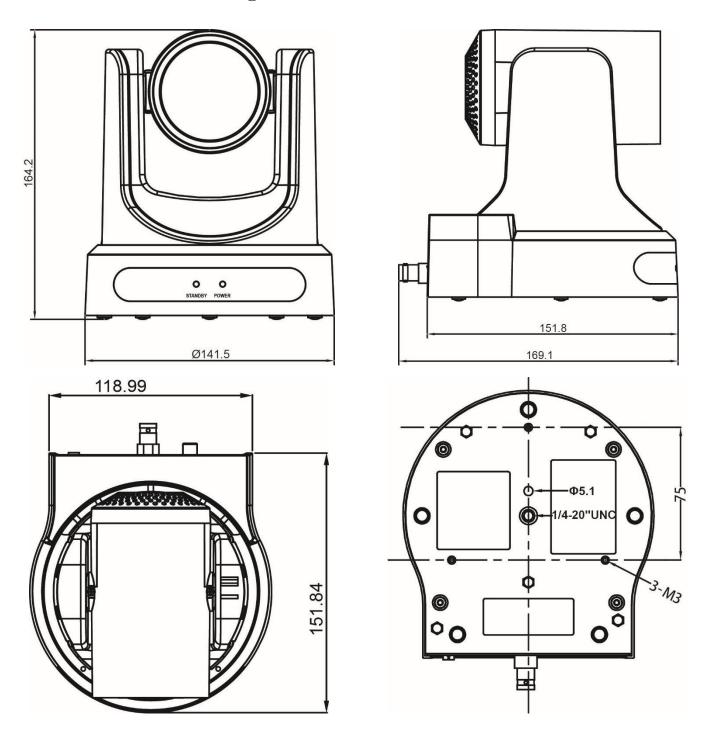

Enable Standby Mode: Press Disable Standby Mode: Press Dis

RS-232 Interface

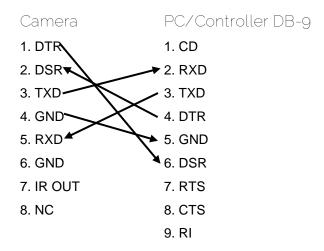

No.	Function
1	DTR
2	DSR
3	TXD
4	GND
5	RXD
6	GND
7	IR OUT
8	NC

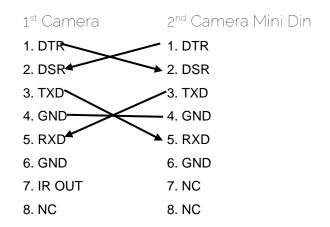

RS-485 Interface

For Initial Connection

For Daisy Chain Control

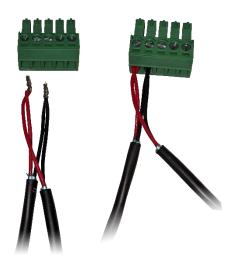

To utilize an RS-485 connection, you will need an unterminated two (2) conductor cable.

- **1.** First, connect the positive (red) wire to the camera's positive phoenix connector port (left).
- **2.** Then, connect the negative (black) wire to the camera's negative phoenix connector port (right).
- Next, connect the positive and negative wires to the positive and negative ports on your joystick controller.
- **4.** To connect multiple cameras, you have the option to connect via daisy-chain or home run.
- 5. In either method, multiple wires will be connected to a single phoenix connector port.

RS-485 Home Run connection

Serial Communication Control

In default working mode, the camera is able to connect to a VISCA controller with an RS-232 and/or RS-485 serial interface.

RS-232 Communication Control

The camera can be controlled via RS-232. The parameters for RS-232C are as follows:

Baud rate: 2400, 4800, 9600, or 38400 bps.

Start bit: 1 bit
Data bit: 8 bits.
Stop bit: 1 bit.
Parity Bit: none.

RS-485 Communication Control

The camera can be controlled via RS-485, Half-duplex mode, with support for VISCA, Pelco-D, or Pelco-P protocol. The parameters of RS485 are as follows:

Baud rate: 2400, 4800, 9600, or 38400 bps.

Start bit: 1 bit.

Data bit: 8 bits.

Stop bit: 1 bit.

Parity bit: none.

PTZOptics VISCA Command List

Part 1: Camera Issued Commands

ACK / Completion Messages				
Command	Function Command Packet Comments			
ACK / Completion	ACK	z0 4y FF (y: Socket No.)	Returned when the command is accepted.	
Messages	Completion	z0 5y FF (y: Socket No.)	Returned when the command has been executed.	

Error Messages	Error Messages				
Command	Function	Command Packet	Comments		
	Syntax Error	z0 60 02 FF	Returned when the command format is different or when a command with illegal command parameters is accepted.		
	Command Buffer Full	z0 60 03 FF	Indicates that two sockets are already being used (executing two commands) and the command could not be accepted when received		
Error Messages	Command Canceled	z0 6y 04 FF (y: Socket No.)	Returned when a command which is being executed in a socket specified by the cancel command is canceled. The completion message for the command is not returned.		
	No Socket	z0 6y 05 FF (y: Socket No.)	Returned when no command is executed in a socket specified nu the cancel command, or when an invalid Socket No. is specified.		
	Command Not Executable	z0 6y 41 FF (y: Execution command Socket No. Inquiry command: 0)	Returned when a command cannot be executed due to current conditions. For example: when commands controlling the focus manually are received during auto focus mode.		

z = Camera Address + 8

On Screen Display Menu

Main Menu

There are many ways to adjust the camera's On Screen Display (OSD) Menu. The following instructions will go over the OSD Menu while using the included IR remote.

Press the [MENU] button to display the OSD Menu. Use the arrow buttons to traverse the OSD menu, the [HOME] button to make selections, and the [RETURN] button to go back a sub menu.

Exposure

Move the cursor to the "Exposure" option and press the [HOME] button to enter the Exposure page, as shown in the figure below.

Expos	sure
Mode ExpCompMo Backlight Gain Limit Anti-Flicker Meter DRC	Auto ode Off Off 2 60Hz Average 2
	ect Item ange Value] Exit

Exposure Mode: Modes include: Auto, Manual, SAE, AAE, Bright

ExpCompMode: Exposure Compensation mode

Options include: On, Off (Only available in Auto mode)

ExpComp: Exposure Compensation value.

Options include: -7 ~ +7

(Only available once ExpCompMode is On)

Backlight: Backlight Compensation mode

Options include: On, Off (Only available in Auto mode)

Bright: Brightness Intensity. Options include: 0 ~ 17 (Only available in Bright mode)

Gain Limit: Maximum Gain Limit.

Options include: 0 ~ 15

(Only available in SAE, AAE, & Bright modes)

Anti-Flicker: Anti-Flicker (lighting) Options include: Off, 50Hz, 60Hz

(Only available in Auto, AAE, & Bright modes)

Iris: Camera Iris value.

Options include: Close, F11.0, F9.6, F8.0, F6.8, F5.6,

F4.8, F4.0, F3.4, F2.8, F2.4, F2.0, F1.8 (Only available in AAE & Manual modes)

Shutter: Camera Shutter value.

Options include: 1/30, 1/60, 1/90, 1/100, 1/125, 1/180, 1/250, 1/350, 1/500, 1/725, 1/1000, 1/1500, 1/2000,

VISCA addresses

Network Connection

1. Operating Environment

Operating System: Windows 2000 / 2003 / XP / Vista / 7 / 8.1 / 10, Mac Catalina and later

Network Protocol: TCP/IP

Client PC: P4 / 128M RAM / 40GHD / support for scaled graphics card, support for DirectX8.0 or more advanced version.

2. Equipment Installation

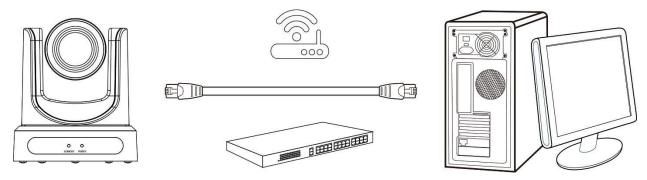

1. Connect the camera to your network via a CAT5 or CAT cable directly to your network switch.

2. Turn on the camera.

3. Once powered on, the orange network light will illuminate and the green light will start flashing.

3. Network Connection

Connect the camera & PC to the LAN as shown below.

Connections to LAN via CAT5 or CAT6 cable

Assigning an IP Address

By default, the camera has the IP address "192.168.100.88". You have several methods to change this IP address to match your network scheme. Please see the instructions below for your preferred setup.

DHCP

If your network supports DHCP, you can have it automatically assign an IP using one of the methods below.

- IR Remote Press [*] > [#] > [4] to enable DHCP
- Upgrade Tool v2.7/v2.8 Select DHCP from Config the tab

Static Address

If you want to give your camera a more permanent IP address, assign the camera a static IP address. You have two (2) options to assign this address.

- 1. Upgrade Tool v2.7/v2.8 Assign a static IP address from the Config tab
- 2. IR Remote Press [#] > [*] > [#] > [number 0~9] to set the camera's IP address to 192.168.100.8(number 0~9)

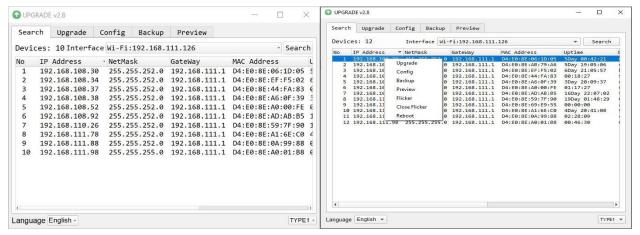

For more information on using the Upgrade tool, please see Using the Upgrade Tool below.

Using the Upgrade Tool

You can use the Upgrade Tool to assign a dynamic IP address, static IP address, firmware upgrade the camera, backup core files, and lastly; restore core files. Please follow the instructions below for best use.

Search Tab

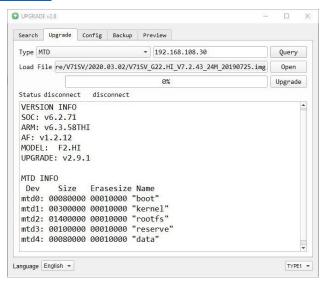

Use the Search Tab to find your camera on your network. The "Interface" drop down allows your to select which network to search. After selecting the proper network type, click the "Search" button to begin your search.

Once you find the camera you wish to adjust, right click the corresponding IP address to reveal the control menu. From here, select the corresponding tab for the way you want to adjust your camera.

Upgrade Tab

The Upgrade Tab allows you to firmware upgrade the camera. To acquire the latest firmware for your PTZOptics camera, for to https://ptzoptics.com/firmware-finder.

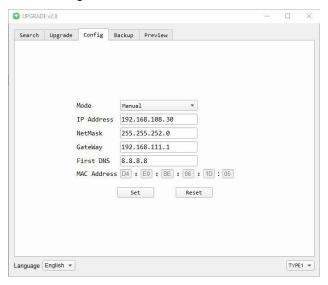

To ensure you follow the proper firmware upgrade method, follow the <u>PTZOptics SDI/NDI Firmware Upgrade</u> Instructions.

Config Tab

The Config tab allows you to change the network parameters of a camera. To properly access this interface, right-click a camera from the Search tab, and select "Config" from the menu.

To assign a static IP address, you'll need to know of a free IP address in your network range, your subnet mask, Gateway, & First DNS.

To find this information, check out the section <u>Discovering your Network Info</u> below.

Alternatively, you can click the "Mode" dropdown and select "DHCP" to have your network auto fill this information.

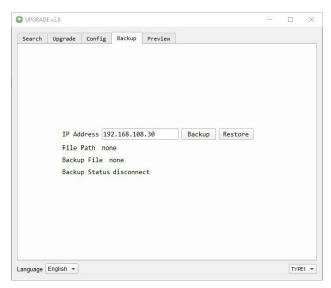

In either case, once the network information is filled, click the "Set" button to apply these parameters. The camera will restart with the new network settings.

Backup Tab

The Backup tab allows you to backup and restore files. For best results, name each backup file something specific to the camera (such as the serial number).

These files consist of:

- Serial Number
- MAC Address¹
- Presets²
- Other core camera files.

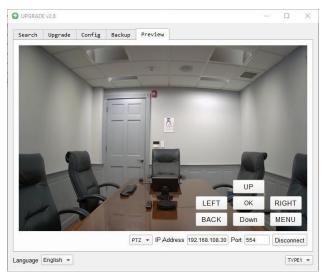

¹Because the MAC Address is stored in this backup file, ensure you do not apply/restore it to a different camera, as that will change the second camera's MAC address to the first camera's MAC address.

²Presets are not always saved properly and may need to be reset.

Preview Tab

The Preview tab allows you to view the RTSP feed of your camera. You can send the camera to the Preview tab from the Search tab, or simply type in the IP address into the field and click "Connect".

Discovering your Network Info

To discover your IP address range/scheme, Subnet Mask, Gateway, & First DNS, follow the instructions below for Windows or Mac OS. You may need to talk with your IT department to obtain this information.

Windows

- 1. Open the Start menu and type "CMD" into the search bar.
- 2. Once the Command Prompt is open, type in "ipconfig" and press the Enter key.
- 3. Scroll down to the section titled "Ethernet adapter Ethernet" or "Ethernet adapter Wireless Network Connection".
- 4. Locate the "IPv4 Address" in that section. This is your computer's local IP address.

```
Microsoft Windows [Version 10.0.19042.985]
(c) Microsoft Corporation. All rights reserved.

C:\Users\[PC]>ipconfig

Windows IP Configuration

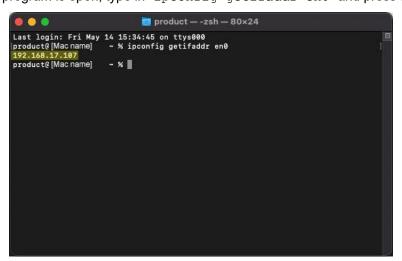

Ethernet adapter Ethernet:

Connection-specific DNS Suffix .: localdomain
Link-local IPv6 Address . . . . : fe80::3440:e4a6:6b03:f206%8
IPv4 Address . . . . . : 192.168.15.117
Subnet Mask . . . . . : 255.255.25.0
Default Gateway . . . . : 192.168.15.1
```

In the example above, the PC's local address is "192.168.15.117", making the network range "192.168.15".

Mac

- 1. Open a new Finder window and go to the Applications folder.
- 2. Open the Utilities folder and select the Terminal program.
- 3. Once the Terminal program is open, type in "ipconfig getifaddr en0" and press the Enter key.

In the example above, the Mac's local address is 192.168.17.107", making the network range "192.168.17".

Camera Web Interface

The Web Interface allows you to control the camera, view the video feed, and adjust many of the camera's settings.

Menu

The Menu allows you to traverse the Web Interface. By default, the "Live" option is selected.

Live

This tab allows you to view the video feed of the camera.

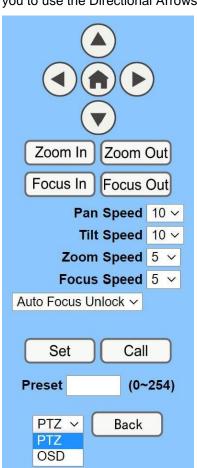

The status bar below the video feed can be used to pause / play the video feed, adjust the audio level, and switch between full screen and windowed view.

The plugin dropdown allows you to select how you view the RTSP feed in the web interface. For best results, set the Second Stream to "MJPEG", and select the "JPEG" from the plugin dropdown.

The Preset Information button allows you to Set, Call, and Name presets $1 \sim 9$.

Directional Arrows

Use the PTZ / OSD dropdown to select how the Directional Arrows behave. While "PTZ" is selected, you will have control over Pan, Tilt, and calling the Home position. When "OSD" is selected, the On Screen Display Menu will open, allowing you to use the Directional Arrows to traverse the OSD Menu.

Directional Arrows: Use the Up / Down / Left / Right buttons to Pan / Tilt the camera or traverse the OSD Menu.

Home Button: Use the Home Button to send the camera to the Home position, or to make a selection within the OSD Menu.

Zoom In / Out: Use the Zoom In and Zoom Out buttons for narrow (tele) or wide views of the scene.

Focus In / Out: Use the Focus In and Focus Out buttons to make manual focus adjustments of the scene.

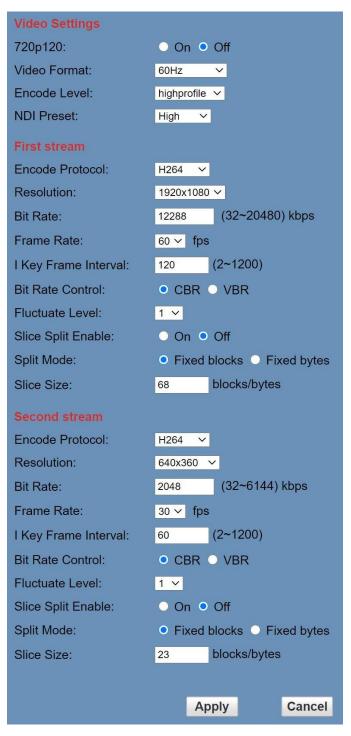

Speed Control: Use the Pan, Tilt, Zoom, and Focus Speed dropdowns to adjust the speed at which you control the camera.

Auto Focus Lock: Use the Auto Focus Unlock / Lock dropdown to manually lock the focus in the current position.

PTZ Presets: After manually positioning the camera in a position you wish to return to; you can save the position as a PTZ Preset. Type a number between 0 ~ 254 into the Preset box and press the "Set" button to save that position. Click the "Call" button to send the camera back to the PTZ Preset position.

PTZ / OSD Dropdown: Use the PTZ / OSD Dropdown to select Pan / Tilt / Zoom control, or On Screen Display Menu Control.

Video

Video Format: Supports 50Hz (PAL), 60Hz (NTSC), & Dial Priority formats.

Encode Level: Supports baseline, mainprofile, highprofile, & SVC-T.

NDI Preset: Supports Off, Low, Medium, & High.

Encode Protocol: Supports H.264, H.265, & MJPEG

Resolution: The first stream supports 1920x1080, 1280x720, 1024x576, 960x540, 640x480, 640x360.

The second stream supports 1280x720, 1024x576, 720x480, 720x408, 640x360480x270, 320x240, 320x180.

Bit Rate: Adjust the maximum bit rate of the network video. The higher the bit rate, the clearer the image will be. Bit rates set too high can congest the network and cause the video to not transmit properly, causing the video to appear

Range: 32 ~ 20480 kbps.

Frame Rate: Adjust the frame rate of the network video. The higher the frame rate the smoother the video feed will appear.

I KeyFrame Interval: Adjust how frequently a keyframe is produced.

Bit Rate Control: Supports Constant bit rate (CBR) & Variable bit rate (VBR).

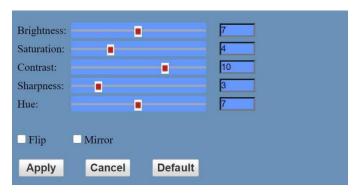

Fluctuate Level: Limit the fluctuation magnitude of variable rate. Supports 1 ~ 6.

Splice Split Enable: Enable / Disable splice split function.

Split Mode: Supports Fixed blocks and Fixed bytes.

Slice Size: Set the slice size.

Image

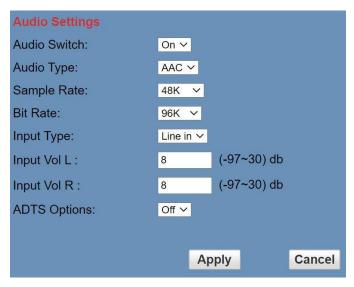

Brightness: Brightness slider. Default: 7
Saturation: Saturation slider. Default: 4
Contrast: Contrast slider. Default: 10
Sharpness: Sharpness slider. Default: 3

Hue: hue slider. Default: 7

Flip & Mirror: Check the Flip and/or Mirror button to rotate the

image accordingly.

Audio

Audio Switch: Enable / Disable audio embedding.

Audio Type: AAC

Sample Rate: Options include: 44.1K & 48K Bit Rate: Options include: 96K, 128K, & 256K.

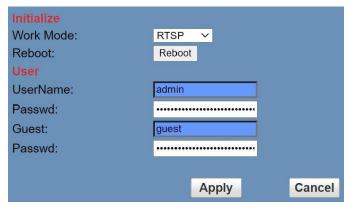

Input Type: Line in.

Input Vol L: Volume of left channel. -91 \sim +30 dB Input Vol R: Volume of right channel. -91 \sim +30 dB ADTS Options: Enable / Disable Audio Data Transport

Stream.

System

Work Mode: Options include: RTSP, SDK, & Multicast.

Reboot: Used to power cycle the camera. **Username:** Username to log in to device.

Username: "admin"

Password: Password to log in to device.

Default password: "admin"

Guest (Username): Guest username to log in to device.

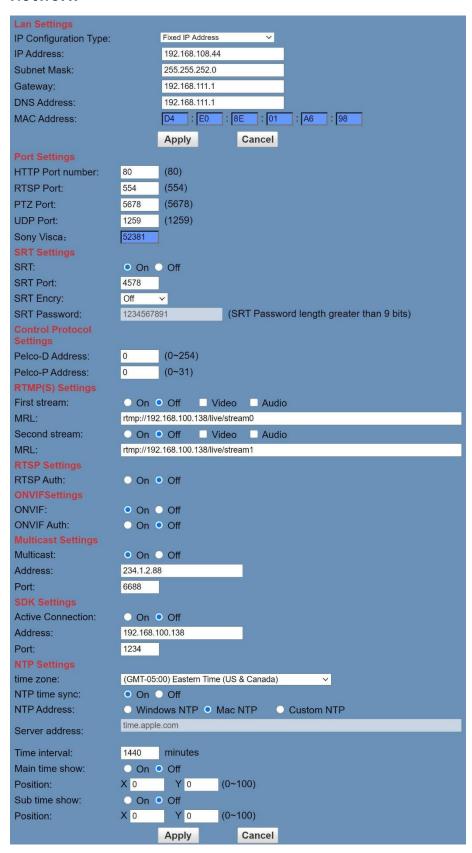

Username: "guest".

Guest (Password): Guest password to log in to device.

Default password: "guest".

Note: The custom password field is limited to 15 characters. Passwords longer than this will be forced to 15 characters.

Network

LAN Settings: The LAN Settings section allows you to adjust the IP parameters of the camera. The default IP address of the camera is 192.168.100.99. You cannot change the MAC address.

IP Configuration Type: Fixed IP Address (Static) & Dynamic IP Address (DHCP).

IP Address: Camera's IP address. Subnet Mask: Network Subnet Mask.

Gateway: Network Gateway.

DNS Address: Network Domain Name Server address.

MAC Address: The camera's MAC address.

Apply & Cancel Buttons: Apply or cancel the changes made to the LAN Settings section.

Port Settings: The Port Settings section allows you to adjust the network ports of the camera.

HTTP Port: This port is used for HTTP-CGI control, and for the web application. Default: 80.

RTSP Port: This port is used for the RTSP streaming protocol. Default 554. **PTZ Port:** This port is used for the TCP/IP control protocol. Default 5678. **UDP Port:** This port is used for the UDP control protocol. Default: 1259.

Control Protocol Settings: The Control Protocol Settings section allows you to adjust the Pelco-D & Pelco-P control addresses.

Pelco-D Address: 0 ~ 254. Pelco-P Address: 0 ~ 31.

RTMP(S) Settings: The RTMP(S) Settings section allows you to enable or disable the tw (2) RTMPS stream's video and audio sources.

First Stream: Enable / Disable Stream 1's Video & Audio.

(First Stream) MRL: Text field for RTMPS Stream 1's Media Resource Locator (MRL).

Second Stream: Enable / Disable Stream 2's Video & Audio.

(Second Stream) MRL: Text field for RTMPS Stream 2's Media Resource Locator (MRL).

RTSP Settings: The RTSP Settings section allows you to enable or disable RTSP Authorization.

RTSP Auth.: Enable / Disable RTSP authorization.

ONVIF Settings: The ONVIF Settings section allows you to adjust the ONVIF settings of the camera.

ONVIF: Enable / Disable the ONVIF protocol. **ONVIF Auth.:** Enable / Disable ONVIF authorization

Multicast Settings: The Multicast Settings section allows you to adjust the Multicast settings of the camera.

Multicast: Enable / Disable the Multicast protocol.

Address: Adjust the Multicast address.

Port: This is the port used for the Multicast. Default: 6688.

SDK Settings: The SDK Settings section allows you to adjust the Software Development Kit settings of the camera.

Active Connection: Enable / Disable the SDK active connection.

Address: Adjust the Multicast address.

Port: This port is used for the SDK protocol. Default: 1234.

NTP Settings: The NTP Settings section allows you to enable / disable the Network Time Protocol of the camera.

Time Zone: Adjust the time zone you wish to use with NTP.

NTP Time Sync: Enable / Disable NTP Time Sync.

NTP Address: Enable Windows NTP, Mac NTP, or Custom NTP.

Server Address: Text field for Custom NTP server.

Time Interval: Adjust the Time Interval in minutes. Default: 1440

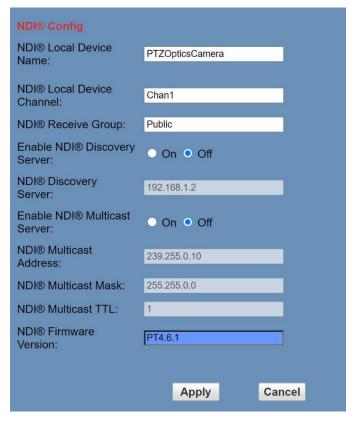

Main Time Show: Enable / Disable Main Time

Position: Main Time position

Sub Time Show: Enable / Disable Sub Time

Position: Sub Time position

NDI® Config

NDI[®] **Local Device Name:** The friendly name the camera will show up as within NDI[®] devices.

For best results, give all 'live' cameras the same Local Device Name. e.g., 'PTZ Cameras' or "Box Cameras".

NDI® Local Device Channel: The channel name the camera will utilize within NDI® devices.

For best results, set a unique Local Device Channel for each camera. e.g., 'Wide Shot' or 'Tight Shot'.

NDI® Receive Group: The NDI® Receive Group allows you to limit which users on your LAN can see the NDI® source. For best results, the Receive Group should remain "Public". Once the Receive Group is changed, you will need to join the Receive Group through NDI® Access Manager.

Enable NDI® Discovery Server: Enable / Disable the NDI® Discovery server.

NDI® Discovery Server: Server address field when NDI® Discovery server is enabled.

Enable NDI® Multicast Server: Enable / Disable the NDI® Multicast Server.

NDI® **Multicast Address:** Multicast address field when NDI® Multicast server is enabled.

NDI® Multicast Mask: Used to adjust the NDI® Multicast Subnet Mask.

NDI® Multicast TTL: Used to adjust the Multicast Time-To-Live interval.

NDI® Firmware Version: Displays the current NDI® version on the camera.

For more information on how to utilize the NDI Discover server, check out https://support.newtek.com/hc/en-us/articles/218109477-NDI-Discovery-and-Registration.

NewTek®, NDI®, NDI® 4, & NDI® HX are all registered trademarks by Vizrt Group®.

Information

The Information section displays the device information, firmware version, & device friendly name. You can adjust the device friendly name as needed to designate the camera.

Language

The Language selection dropdown allows you to change the language of the Web Interface. Select either "English", "Chinese" (中文), or "Russian" (Русский).

Serial Number *Not always accurate

Photobooth Functionality

Your PTZOptics camera can quickly and easily take a series of four (4) still image or video files that are stored on the camera and made accessible with a standard web browser on the same network.

Photos

You have two (2) options to initiate a series of four (4) still images to be captured...

You can enter the following HTTP string into any web browser on the same network as the camera to initiate a series of four (4) still images.

```
http://[camera ip]/cgi-bin/booth.cgi?0&4&[delay]&photo&0
```

In this example, **[Delay]** is utilized to add additional delay, in seconds, between still images being taken. **[Delay]** can have any value from 1 ~ 9 seconds.

You can also press the "[F1]" button on your IR remote to initiate a "quick capture" that has, approximately, a four (4) second delay between four (4) still images being captured.

To retrieve your series of four (4) still images, you will need to open a standard web browser with network access to the camera and use the following HTTP strings to retrieve the still image files as desired.

```
Image 1: http://[camera ip]/photo1.jpg
Image 2: http://[camera ip]/photo2.jpg
Image 3: http://[camera ip]/photo3.jpg
Image 4: http://[camera ip]/photo4.jpg
```

Videos

You have two (2) options to initiate a series of four (4) videos being captured...

You can enter the following HTTP string into any web browser on the same network as the camera to initiate a series of four (4) video recordings.

```
http://[camera ip]/cgi-bin/booth.cgi?0&4&[delay]&video&[length]
```

In this example, **[Delay]** is utilized to add additional delay, in seconds, between videos being taken. **[Delay]** can have any value from $1 \sim 9$ seconds.

In this example, [Length] is utilized to adjust the overall length, in seconds, of each video file. [Length] can have any value from $1 \sim 10$ seconds.

You can also press the "[F2]" button on your IR remote to initiate a "quick capture" that has, approximately, a four (4) second delay between the four (4) second delay between the four (4) ten (10) second videos being captured.

To retrieve your series of four (4) video files, you will need to open a standard web browser with network access to the camera and use the following HTTP strings to retrieve the still image files as desired.

```
Video 1: http://[camera ip]/video1.mp4
Video 2: http://[camera ip]/video1.mp4
Video 3: http://[camera ip]/video1.mp4
Video 4: http://[camera ip]/video1.mp4
```

Note: It can take the camera time for the video files to be fully captured and processed. If they are not retrievable, please wait an additional 30 ~ 60 seconds for the process to complete.

Maintenance and Troubleshooting

Unqualified Applications

- Do not shoot extremely bright objects for a long period of time, such as sunlight, ultra-bright light sources, etc.
- Do not operate close to powerful electromagnetic radiation, such as TV or radio transmitters, etc.

Troubleshooting

- No image
 - Check whether the power cord is connected, voltage is OK, & Power LED is illuminated.
 - Check whether the camera can "self-test" after startup (camera will do a brief pan/tilt tour and return to the home position, or preset 0, if that preset is set).
 - Check that the video cable is connected correctly.
 - If SDI, make sure that the destination device is accessing the SDI port that you plugged into.
 - If HDMI, make sure that the destination device is accessing the HDMI port that you plugged into.
 - Check that the lens cap is not installed onto the camera lens.
 - Check that the iris is not closed.
- Abnormal display of image
 - Check the rotary dial on the back of the camera. Be sure to use a resolution and frame rate that is supported by your software / hardware.
- Image is shaky or vibrating
 - Check whether the camera is mounted solidly or sitting on a steady horizontal and level surface.
 - Check the building and any supporting furniture for vibration. Ceiling mounts are often affected by building vibration more than wall mounts.
 - Any external vibration that is affecting the camera will be more apparent when in tele zoom (zoomed in) settings.

Control

- IR Remote controller does not control the camera
 - Does one of the four (4) "Camera Select" buttons (top row of remote) light up when you press any of the buttons on the remote?
 - If not, change the batteries in the remote
 - Are the camera and remote set to the same IR address? When "Display Info" is enabled (within P/T/Z) in the OSD, the camera will display it's IR address upon start up. Set the IR remote to the same IR address to control the camera.
 - Try removing other sources of IR interference (e.g. sunlight, fluorescent lighting, etc.)
- Serial communication does not control the camera
 - o Make sure the camera is on and functioning with the IR remote controller.
 - Verify that the RS-232/RS-485 cable is connected correctly and using the proper pinout.
 - Verify the communication settings of the control software or device (e.g. joystick).
 - Verify that the communication port on the controlling device is activated (e.g. Com port on PC).
 - Verify that all communication settings in the OSD Setup Menu correlate to the commands being used (e.g. VISCA address).

Certifications

- FCC Tested under FCC 47 CFR Part 15, Subpart B, Class A:2011, ANSI C63.4 2014
- CE Tested under EMC 2014/30/EU
