

## QUICK START GUIDE

Please refer to the full manual 'USB Tally Controller Manual.pdf' on the included Thumb Drive for detailed installation instructions.

1. Insert the Thumb Drive into an available USB Port on the NewTek TriCaster. Navigate to the Tally Install folder on the thumb drive and double click the 'Setup.exe' file. Follow the on-screen instructions.

**IMPORTANT!** Do **NOT** change the installation folder during the installation process. NewTek has mandated where the Tally Lights application must be installed in order to be properly called by its software. If you change the installation folder, the Tally Lights will NOT work properly.

2. Once setup is complete, remove the Thumb Drive from the USB Port and store it in a safe place for any future use.
3. Connect the USB Tally Controller to the NewTek TriCaster using the included USB Cable. Once the device is properly recognized, the green LED on the USB Tally Controller will be illuminated.
4. Connect the Tally Lights you wish to use to the USB Tally Controller.

**NOTE:** The Tally Controller (TLC-V) is designed to be used with the Tally Lights available through Tally-Lights.com. Please use caution when connecting to any other tally products as the power requirements for other tally products may vary. **Never connect the USB Tally Controller to a Camera Control Unit (CCU) unless you have verified that either; (A) the CCU can accept voltage as you may harm the CCU, or (B) you have purchased the USB Tally Controller specifically designed for 'contact closure' circuits (Model TLC-C).** Contact Tally-Lights.com with any questions or concerns you may have.
