

OMNIplay3

For Android™

OMNIplay 3 - for Android

Databeat OMNIplay 3 is a stable, high quality media player for Digital Signage / info screens and music. It is easy to install, has no moving parts and uses little power. OMNIplay 3 comes with DatabeatOMNI software pre-installed and will automatically start playing content when connected to power and network. It can be connected to both wired and wireless networks, and the content is uploaded and stored locally. OMNIplay3 supports Full HD and 4K playback.

How to get started?

In order for OMNIplay3 to play your files, you must be a registered user with a location, channel and a Player ID in DatabeatOMNI. When registering a new location, DatabeatOMNI will automatically generate a PlayerID. When PlayerID is entered (simple and clear user manual is included with the player), it will retrieve the content you have uploaded in DatabeatOMNI and play it on your screen.
