

DEFENCE

**AUV Identification Payloads
For Mine Countermeasures**

Complete Situational Awareness

4K resolution enhanced images and quantifiable laser data for complete situational awareness. Direct laser measurements of mine targets to enhance image-based optical identification and localization.

High Operational Tempo

Onboard, real-time light correction and undistortion for rapid download and post-mission analysis. Target reacquire using AUV assets to minimize sorties and increase operational tempo.

Increased Covertness

Complete mine identification with submerged AUVs. Covert ID of multiple MLO's in a single AUV mission with a vessel at standoff distance.

Reduced Risk

Remote camera ID minimizes minefield driver deployments by reducing false positives from sonar detection.

Low Cost

Payloads built for cost-efficient platforms reduce cost. Reduction of diver team and expensive maintenance of MCMVs.

Mine Identification Payloads

Performance

- High Resolution - 2464 points per laser profile.
- Leading sensor sensitivity allows short exposures for over 50Hz laser line capture.
- PPS time synchronization.
- Industry leading laser power at 700mW for max water penetration.

Reliability

- Rigorous opto-mechanical design to ensure high accuracy at high speeds and at range.
- Actively cooled laser and camera for consistent operation at all temperatures and depths.
- High signal-to-noise ratio to allow detection and amplification in poor water conditions.

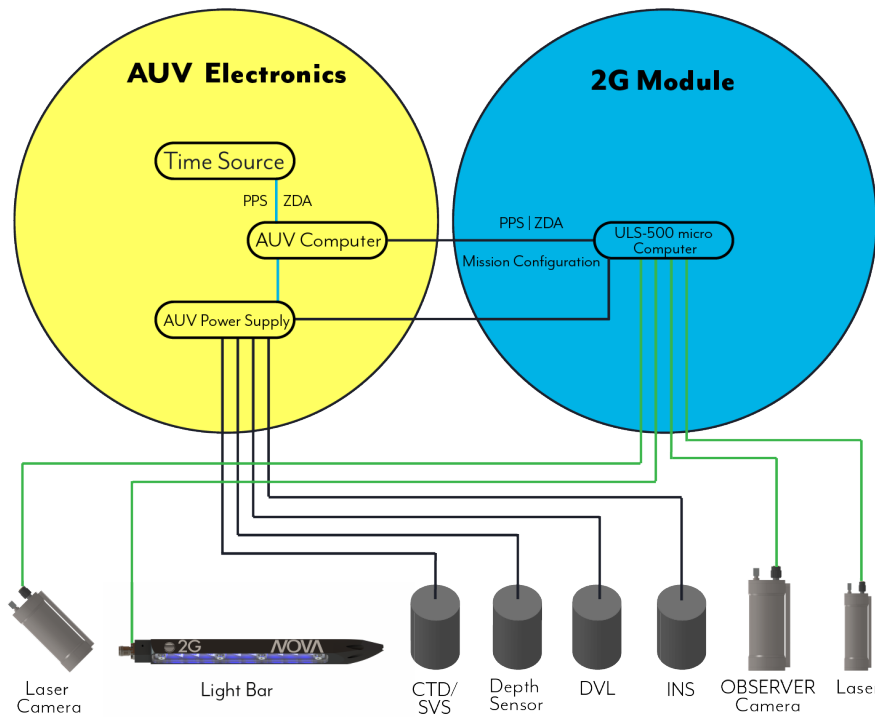

Customer-Focus

- Includes tested accuracy and precision report.
- No infield calibration required.
- Camera specifically designed to capture laser profiles.
- Integration, testing, and operational support.

AUV Integration

- **API** allows seamless integration and autonomous operation.
- **High sample rates** for industry leading along-track resolution.
- **Long range** capture capability at up to 10 meters.
- **Precise positioning** from PPS time synchronization with navigation sensors.
- **Proven reliability:** 2G sensors have integrated with the indus-

Payload Configurations

Optical ID Payload

- ULS-500 Micro
- OBSERVER stills camera
- 2G NOVA Lightbar
- Drop-in module or retrofit integration

Camera ID Payload

- 4K OBSERVER stills camera
- 2G NOVA Lightbar
- Drop-in module or retrofit integration

Mine Identification Payloads

Available Configurations

HYDROID
A KONGSBERG COMPANY

REMUS 100, 300, 600

Optical ID Payload (600 only)
Camera ID Payload (all)

L3HARRIS

IVER 3 Open System

Optical ID Payload
Camera ID Payload

**TELEDYNE
GAVIA**
Autonomous Underwater Vehicles

Gavia

Optical ID Payload
Camera ID Payload

GENERAL DYNAMICS
Mission Systems

Bluefin 12S, 21

Optical ID Payload (21 only)
Camera ID Payload (12S & 21)

Optical ID Payload Specifications

2G OBSERVER camera & NOVA Lightbar	
Camera Sensor	2/3" CMOS 12-bit
Camera Type	Monochrome
Resolution	2464 x 2056
Sensitivity	> 70% Quantum Efficiency
Frame Rate	3 Hz (Real-time image processing) 10 Hz (Raw images only)
Signal to Noise	39.6 dB
Dynamic Range	76.0 dB
Field of View	50° x 44° in water
Lens	Fixed -6mm - F2.1
Image Processing	Real-time image enhancement & undistortion
Data Format	Raw 12-bit .Tiff Processed 8-bit .Tiff
Number of LEDs	8 or 16
LED Colour	Blue or White
Light Output	Up to 200,000 lumens (adjustable)
2G ULS-500 Micro (laser scanner)	
Laser Type	700 mW Class 3B 450nm
Points Per Laser Line	2464
Angle of View	50°
Resolution	Along Track: 18mm Across Track: 1.5mm (4m altitude, 3 knots, and 85 Hz laser rate)
Range	10m maximum
Frame Rates	85 Hz (laser only) 50 Hz (laser + stills)
Calibration	Calibrated on Vehicle
Data Formats	Laser Scanner: .xyz (CSV), LAS Publishing
System	
Power	Laser Scanner & Control Electronics: 55W typical Stills Camera & LED Panel: 50W typical
Time Synchronization	Synchronization to INS PPS Time Synchronization
Communication	Ethernet
Control	Option 1: Wifi Accessible Windows GUI Option 2: Mission Planning Integration with API
Data Download	Vehicle Gigabit Ethernet Network, or External Bulkhead
Data Storage	2 TB Solid State Drive
Recording Time	17 Hours @ 50Hz Laser, 2Hz Stills (8-bit Images)
Software	ViewLS Control GUI C++ API ViewLS Data Processor

Mine Identification Payloads

Camera ID Payload Specifications

2G OBSERVER camera & NOVA Lightbar	
Camera Sensor	1.1" CMOS 12-bit
Camera Type	Monochrome
Resolution	4112 x 3008 (12.4MP)
Sensitivity	> 70% Quantum Efficiency
Frame Rate	2 Hz (Real-time image processing) 4 Hz (Raw images only)
Signal to Noise	39.6 dB
Dynamic Range	76.0 dB
Field of View	Up to 90° diagonal in water (dome port)
Lens	Fixed Focus - 8.5mm - F2.8
Image Processing	Real-time image enhancement & undistortion
Data Format	Raw 12-bit .Tiff Processed 8-bit .Tiff
Number of LEDs	8 or 16
LED Colour	Blue or White
Light Output	Up to 200,000 lumens (adjustable)
System	
Dimensions	Camera Module: 171.5mm (Length) 190.5mm (R100 Diameter) or 324mm (R600 Diameter) Light Bar: 314mm (Length)
Power	Stills Camera & Light Bar: 50W typical
Time Synchronization	Synchronization to INS PPS Time Synchronization
Communication	Ethernet
Control	Option 1: Wifi Accessible Windows GUI Option 2: Mission Planning Integration with API
Data Download	Vehicle Gigabit Ethernet Network or External Bulkhead
Data Storage	2 TB Solid State Drive
Recording Time	17 Hours @ 2 Hz Stills (Enhanced Images)
Software	ViewLS Control GUI C++ API ViewLS Data Processor
