

Backend Engineer

The Role

Based in London but currently working remotely.

As a result of our successful transition to remote working due to COVID-19, we are really proud to be in a position to grow our outstanding technology team. We need a Backend Engineer to join us and help us take our tech offering to a new level. This is an environment that offers challenging work that can make a difference. As the Backend Engineer, the ability to engage in design discussions and help to drive engineering practices will be paramount.

Responsibilities will include producing code in adherence to agreed standards, and working closely with the product, production and content teams to develop user interface concepts. This position will require previous experience of API architecture and web development.

Main priorities for the Backend Engineer will include delivery of high-quality well-tested software and providing input to the design. The Backend Engineer will be an integral member of the backend software development team, proactively keeping abreast of industry updates, skills and technologies. Our team continuously shares information, ideas and best practice to improve software quality and delivery.

- Mentor and inspire team members and colleagues
- Produce code to agreed standards
- Work closely with product, production and the content team
- Provide input into the design of software
- Hands on approach and accountability
- Proactively keep abreast of industry developments, skills and technologies
- Share information, ideas and best practice
- Demonstrate a logical and structured approach

The Person

You will already have a solid background in Backend Engineering with demonstrable experience using an MVC framework and components. We welcome applications with proven experience writing modern OO PHP (using PHP 7.15.6+). Previous knowledge of operating in a team based environment both remote and local, will be essential for successful applicants. You will be comfortable using Linux CLI and fluent in developing in a Linux/Mac-based environment. Your experience with Docker, coupled with the ability to operate in an agile development team environment will be paramount to being successful. . If the above sounds like it ticks boxes for you then please get in touch.

- Upper Class Science or Computer related degree or equivalent industry experience
